"EVEIT MAN IS A VALT \&BLE MEMBER OF SOCIETY WHO, BY IUS OBSELVATIONS, KESEARCIHES, AND EXPERIMENTS, PROCURES KNOWLEDGE FOR AFS" —SMITIIMON
(Publication 2918)

CITY OF WASHINGTON<br>PUBLISHED BY THE SMITHSONIAN INSTITUTION

baltimoke. mD.. U. s. a.

## ADVERTISEMENT

The present series, entitled " Smithsonian Miscellaneous Collections." is intended to embrace all the octavo publications of the Institution, except the Annual Report. Its scope is not limited. and the volumes thus far issued relate to nearly every branch of science. Among these various subjects zoology, bibliograplyy, geology. mineralogy, anthropology, and astrophysics have predominated.

The Institution also publishes a quarto series entitled "Snithsonian Contributions to Knowledge." It consists of memoirs based on extended original investigations, which have resulted in important additions to knowledge.
C. G. ABPOT,

Acting Secretary of the Smithsonian Institution.

## CONTENTS

World Weather Records. Collected from official sources by Dr. Felix Exner. Dr. G. C. Simpson, Sir Gilbert Walker, H. Helm Clayton, and Robert C. Mossman. Assembled and arranged for publication by H. Helm Clayton. Published under grant from John A. Roebling. August 22, 1927. Ir99 pp. (Publ. no. 2913.) (Whole volume.)

## PREFACE

The collectors of the Errata for the Worfor Wteather Recorns are greatly indebted to the officials in charge of the various weather services and meteorological observatories of the world who have not only furnished the original data, but most of whom have compared the published data with the originals and sent in corrections. Corrections have also been received from students at various miversities who have used the data.

Many of these corrections are snlall and well within the probable errors of the ohserved values, so that the question was raised as to the advisability of publishing small corrections; but it was decided to publish all the corrections received and leave it to the judgment of the students using the data as to what extent corrections were desirable.

Some of the data have not yet been compared with the originals so that the list is not complete.

# WORLD WEATHER RECORDS <br> ERRATA 

## NOTES AND ENTLANATIONS

CORRECTIONS, EXPLANATIONS, AN゙I ADIITIONS
Page
vii Contents. Last line ; for page I 8 89, write IIgi.
19 Khartoum. Line 4 ; Dec., for -1.2 , write +1.2 .
25 Zanzibar. Line 15 ; the height of the barometer above sea level was changed from 73 ft . to 72 ft in April 1905.
Karachi. Notes are given on pressure and temperature hut only precipitation is published on pp. 262 and 263.
Darwin. For West Australia, write Northern Austratia.
()hir, insert:-The "Kamerschuthans" (2044 m.) lies on a southward sloping that depression (Mulke) under the Obirgifels, which rises to the $N$ and NW of the observatory to a height of 2144 m . and carries the " Hannwarte."

The thermometer is in a white-grained (weissgestrichenen) domble louvered wooden shelter on the N NW wall of the house, 3.5 m . alove the ground, protected by boards on each side from the direct rays of the suns. Frost (Kaureif) formation on the shelter is rare.

The ombrometer without a Nipher fumnel is about 2.5 m . from the SW wall of the house and in consequence is not well exposed.

See the yearly report of the Somblickverein, especially Band XVIl, 16-22: "' L'ebersicht neleer die lirgebnesse der meteorologischen Beobachtungen bei dem Berghaus auf dem Obir in Kärnten, von J. Hann." highest point of the lisE to WNW lying ridge of the high somblick. 'Foward the NNE there is a steep) descent toward the valley (Rauristal). The southern slope is glaciated. Local winds are felt irom the NNE (Ramristal) and SW (Fleisstal-M̈̈lltal).

The thernometer is in a white-grained double louvered wooden shelter on the north side of the round anemometer

Page tower, 6.7 m , above the ground. In the winter much rough frost (Ranreif) forms also on the inside of the thermometer shelter.

The ombrometer is in front of the west side of the house, fairly favorably situated, without a Nipher fummel.

See the yearly report of the Sonnblickverein from I892 on, especially Band XXVI/XXVII, 3-12: "Zur Meteorologie des Somblicks, von J. Hann."
44 Gibraltar. Line 39; for 1800-1919, write 1900-1919.
45 Gibraltar. Delete lines 7-10; see p. 46, line 19.
45 Gibraltar. The following has been omitted from the rainfall introduction: " Up to I912 the gage was in a fenced entclosure, with thermograph screen and other instruments, adjoining observatory building, but in 1912 the rain gage was fixed 46 ft . above Mean Sea Level on a sloping roof of a bomb-proof shelter about 105 ft . south of observatory building. The observatory itself is situated in an obsolete bastion of the fortifications on the sea front, southwest side of the Rock and 50 ft . above Mean Sea Level."
49 Valencia. Line 24 ; for I.2, write 3.7.
51 Berlin. The values of temperature from 1804 to 1816 are slightly too low. From 1873 to 1882 they are abont $0.2^{\circ} \mathrm{C}$. too high, and in 1886 about $0.2^{\circ}$ C. Loo low.
52 Berlin. Height of the thermometers: an! Schluss hinter 27.5 m . einzufügen (thermometer in shelter).
52 Frankfurt a. Main. Height of the thermometers: From February 1, 1899, to December, 1913, it was 2 111., fron1 January 1, 1914, to December, 1920, it was 2711 .
53 Potsdam, insert:-Pressure : the values 189.3 -ryoo are 0.5 mm . too low (not corrected to gravity at $45^{\circ}$ Lat.).
54 Hvar (I esina.) Jugoslavia. The station is located on a bay on an island of the same name, on a gentle slope directed toward the SSW. Toward the sea are some low lying islands. Toward the interior the island rises to an elevation of ahout 300 m . The height of the harometer above sea level was 20 m .

The psychrometer in igod was on the NE side of the olserver's honse in a sheet-nnetal screen placed abont 4 m . above the gromind. When the screen was heated by the sun's rays, a reserve thermometer on the NW wall was read. The carlier exposure is not known.

Page The ombrometer in 1908 was favorably located in a terraced garden of the observers.
56 Norway, insert:-Kristiania is now Oslo. Bodo should be Bodö, Gjesvar should be Gjesvaer.
76 New York. Height of thermometer: 1899-1910, 313 ft . should be 1899, 313 ft ; 1900-1910, 108 ft .
79 Salt Lake City. Line 13 ; for 4366.4 ft , write 4360.4 ft .
84 Bermuda. Under heading " Notes" delete " accepted as equivalent to $\frac{1}{2}(9+15)$ and no " and substitute: ". . . of obsservations bear the statement 'Gravity.' . . . ."
85 hermuda. Temperature Authorities : insert:--" $1866-1886$. As for pressure."
86 Bermuda. Rainfall Authorities; insert:-" $1866-1886$. As for pressure."
(13 Stykkisholm. Temperature remarks, line 19; for 1898, write 1868.

109 Argentina. The mean temperatures, as in the case of the mean pressures, when not the average of 24 hourly values, are the means of observations made at $7^{\mathrm{h}}, 14^{\mathrm{h}}$, and $21^{\mathrm{h}}$ or $8^{\mathrm{h}}$, $14^{\mathrm{h}}$ and $20^{12}$ corrected to the mean of 24 hours. In no case have the means of the daily maxima and minima corrected to the mean of 24 hours been employed as stated in the Notes.
109 Ajo-General Lavalle. Kainfall; the observations were taken at the "Estancia Los Yngleses" situated in the proximity of the north promontory of Cape San Antonio, some six miles from the seaboard of the Atlantic Ocean and also on the fringe of the bay of Samborombon. A " Weather Journal " consisting of readings of a barometer, thermometer, hygrometer, and also non-instrumental phenomena (winds, etc.) dates back to 1838 . In 1857 there was added a 6 -inch float rain gage with a measure graduated to hundredths of an inch. In I 884 this was exchanged for ant 8-inch Negretti \& Zambra gage with which the earlier one was tested and found true. The rim of the rain gage is 9 m . (not 15 ) above sea level and 1.2 m . ( 4 ft .) above ground. The record throughont has been kept by the Gibson family, who acquired the property in 1825 .
110 Brazil. Mr. R. C. Mossman writes that " much of the Brazilian data which figure under his name were sent to him at different dates between the years 1911 and 1925 by Dr. Morize or his successor, Dr. Sampaio Ferraz."

Page
II7 Año Nilevo. Add Argentina.
i20 St. Helena. Under Changes of Site, after "igo5 ft.," the sentence should continue: " giving the height from November 21, 1910, to December. I920, as ig8o feet." The sentence "A re-survey . . . . ioo ft. too low" should be deleted and replaced by: "A comparison with some earlier observations at a low-level station suggests that this determination is about 50 feet too low."
I2I South Orkneys. Laurie Island. Site: previous to February i9, igo6, the barometer was at a slightly lower elevation, but the data for the whole period are referred to the height of 7 m .

Hours: prefix the word "eye " before "observations."

\section*{GAMBAGA, GOLD COAST}

Lat. \(10^{\circ} 3 \mathrm{I}^{\prime} \mathrm{N}\). Long. \(0^{\circ} 26^{\prime} \mathrm{W}\).
Precipitation.
Authorities:
1899 to 1920. Manuscript returns communicated by the Director of the Medical and Sanitary Service, and filed in the Meteorological Office, London.
From i899 to 1912 June, the returns give daily olservations; from 1912 July to 1920 December, monthly summaries only are available.
Site: There is no information regarding the instrument or its exposure. The site of the station is probably about 350 ft . above Mean Sea Level.

\section*{HELWAN, EGYPT}

\section*{Authority.}

Physical Department, Ministry of Public Works, Cairo, Egypt. Pressure.

Site: The leight of the barometer above Mean Sea Level was 115.6 m . throughout the period.

Instruments: A barograph was in use throughout the period controlled by the following barometers:
r904 to 1911 August. Fuess Syphon 46 index
error correction applied..............--0.I mmn.
191I August to 1922 July. Fuess Syphon 432
index error correction applied. ....... +0.2 mm.
1922 July to December. Fuess Syphon 430 index error correction applied.............. 0.0 mm.
Hours: The values are the means of 24 hourly readings from the barograph controlled by eye observations at \(8^{\mathrm{h}}, 14^{\mathrm{h}}\) and \(20^{\mathrm{h}}\).
Notes: The readings are at normal gravity (Lat. \(45^{\circ}\) ) and station level, a correction of \(-\mathbf{1 . 0 0} \mathrm{mm}\). having leen applied to the eye olservations.
Temperature.
Exposure: There has been no clange of exposure during the series.

\section*{Hours:}

1904 to 1905 . The values are from the dry bull olservations at \(8^{\mathrm{h}}\), \(14^{\mathrm{h}}\) and \(20^{\mathrm{h}}\), and the minimum thermometer
realings, the mean being calculated according to the following formula:
\[
1\left(S^{h}+\mathrm{I} 4^{h^{h}}+20^{h_{1}}+\mathrm{Min} .\right)
\]
and reduced to the true means of \(2+\) hours by applying the following corrections:
 1906 to 1920 . The values are the means of 2f hourly readings from the themograph controlled by eye observations at \(8^{h}\), \(I_{4}{ }^{\text {h }} \operatorname{and}\left(20^{h_{h}}\right.\).
192I to 1922. As for 1004 to 1905.
Precipitation.
The height of the rim of the rain gage aloove the ground was I. 0 ml .

\section*{JOIAANESBUR(i, SOLTH AFRICA}

Authority.
Meteorological Office, Deparment of [rrigation, I'retoria, Lhon of South \(\Lambda\) frica.
I'ressure.
Site: The observations were taken at the Observatory; the height of the barometer cistern above Mean Sea Level was 5925 ft . throughont the period (igof to 1924).

Hours: 'The hour of observation was \(62^{1 /}\) Greenwich Mean Time throughout the period.
Notes: All values have been corrected to nommal gravity ( 1 at . \(45^{\circ}\) ).
Temperature.
Sitc: As for Pressure.
Mean: The standard admpted is the mean between the mean daily maximum and meatn daily minimum.
Precipitation.
Site: The olservations were taken at Joubert Park; the height above Mean Sea Level was 5.750 ft .

KHARTOUM, AN(iLO-EGYPTIAN SU1)
Authority.
Physical Department, Ministry of P'ublic Works, Cairo, Egyph.
Pressure.
Sitc:
1003 April to 1910 December. At the Military Hospital.
1yos January to 1922 December. At (iordon College.

The values for 1903 April to 1907 December have been reduced to the standard of Gordon College (height of the barometer above Mean Sea Level 390 m.) by the means of the three years in common, 1908 to 1910 . For 1908 to 1910 the figures given are the means between Gordon College and the Military Hospital reduced to Gordon College (see 1903 April to 1907).
Instruments: At the Military Hospital: 1903 April to 1904 December. Fuess Portable \({ }^{1} 518\). index error correction applied. +0.30 mm . 1905 January to 1906 Junc. Fuess Portable 5 I 8 , index error correction applied. . . . . . . + o. Io 1 mm . igo6 June to igio December. Fuess Portable I 518 , index error correction applied. \(\ldots+0.37 \mathrm{~mm}\).
At Gordon College.
igo8 January to 1909 November. Fuess Portable 1727 , index error correction applied. . +0.63 mm .
1909 December to 1910 December. Fuess Portable 1630 , index error correction applied . . . . . . . . . . . . . . . . . . . . . . . +0.40 mm .
19It Jantary to 1913 December. Fiuess Portable I630, index error correction applied. . +0.26 mm .
1914 January to 1922 December. Fuess Portable If 30, index error correction applied \(\ldots+0.36 \mathrm{~mm}\).
Hours: The values given are the direct means of observations made at \(8^{\mathrm{h}^{1}}\), \(14^{\mathrm{h}}\) and \(20^{\mathrm{h}^{\mathrm{h}}}\).
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ).
Temperature.
Sitc:
igor to 1910 . At the Military Hospital.
191I to 1922. At the Gordon College.
The values for 1901 to 1907 are corrected to the standard of Gordon College by means of the three years in common igos to 19 Io.
Hours: The values are from dry bull observations at \(S^{\text {hl }}, 14^{\text {h }}\) and \(20^{\mathrm{h}}\), and the minimum thermometer readings, calculated according to the following formula:
\[
\frac{1}{4}\left(8^{h}+14^{h}+20^{h_{1}}+\text { Min. }\right)
\]
and reduced to the true means of 24 hours by ap-
plying the following corrections based on five years' thermograph records at Gordon College.
\begin{tabular}{llllllllllll} 
& Jan. Feb. Mar. Apr. May June July Aur. Sept. & Oct. Nov. Dec. \\
C. \\
+1.3 & +1.1 & +1.2 & +1.1 & +1.0 & +1.1 & +0.7 & +0.9 & +0.8 & +0.9 & +1.0 & -1.2
\end{tabular} Precipitation.

The height of the rim of the rain gage above the ground is 1.2 m .

\section*{KIMBERLEY (KENILIVORTII), SOUTH AFRICA} Authority:

Dr. J. R. Sutton, Kenilworth Olservatory, Kimberley. Pressure.

Site: The height of the larometer above Mean Sea Level was \(394+\mathrm{ft}\). throughout the period ( 1895 to 1923).
Instrament: A Newman standard barometer was in use throughout the period.
Hours: The values are the means of observations at \(82^{1 \mathrm{~h}}, 142^{\frac{1 \mathrm{~h}}{1}}\) and \(20^{1 \mathrm{~h}}\) both meridian time.
Notes: All values have been corrected to normal gravity (Lat. \(+5^{\circ}\) ) by applying a correction of \(-0.0+3 \mathrm{in}\).
Teaperature.
Site: As for Pressure.
Hours: The values given are:
1. The means of 24 hourly readings.
2. The means between the mean daily maximum and mean daily minimum.
Exposure: A large louvred screen was in use throughout the period.

\section*{Precipitation.}

Site: As for Pressure.
Site and Instruments:
1. From 1874 to 1896 records were taken at Kimberley ly either a Nathews rain gage with a 5 -in. dianeter or by a Lee rain gage with an \(S\)-in. diameter, at a height of \(I \mathrm{ft}\). aloove the ground.
2. From 1894 to 1923 observations were taken at Kenilworth with an 8 -in. gage at a height of 3 ft . above the ground.

\section*{LAGOS, NIGERIA}

Lat. \(6^{\circ} 27^{\prime}\) N. I.ong. \(3^{\circ} 24^{\prime}\) E.

\section*{Pressure.}

\section*{Authorities:}

1891 to 1901 May. Manuscript returns communicated by the Chief Medical Officer and filed in the Meteorological Office, London.
igor June to 1920 December. Nigeria Government Gazettes with the exception of :
1914, November and December; 1915, September to December ; i9ı6, i917, i918, 1919 and i920, January, for which months the data were extracted from the Nigeria Blue Books.
Changes of Site:
I891 to 1896 November. 25 ft.
I896 December to 1920. 22 ft .
Changes of Instrument:
In I89I January, a Marine Barometer, 110. 657, index error correction -. 005 in., was in use.
In 1922 January, a Fortin Barometer, no. 2304, Negretti and Zambra, index error correction +.003 in . was in use. The date of change is unknown.
Changes of Hours of Observation:
i891 to 190 February. \(8^{\text {h }}, 16^{\text {h }}\).
1901 Narch to 1901 September. \(9^{\text {h }}, 16^{\text {h }}\).
1903 October to \(1920.9^{\text {h }}\), \(15^{\text {h }}\).
These hours have been taken as comparable. The hours from 190i October to 1903 September are unknown, but are probably \(9^{\text {h }}\) and \(16^{\mathrm{h}}\).
For the months taken from the Nigeria Blue Books (see Authorities) the observations are at \(9^{\mathrm{h}}\) corrected to \(\frac{1}{2}\left(9^{h}+15^{\text {h. }}.\right)\) by the following corrections:
Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec.
Inclies \(-.052-.050-.046-.043-.041-.039-.041-.046-.048-.047-.047-.050\)
Notes:
A correction, -.076 in., to reduce values to normal gravity at Lat. \(45^{\circ}\), has been applied thronghout.
I891 to 1896 November. A correction of +.003 in . has been applied to reduce vahues to height of 22 ft .
1902 July to 1905 April. For some unknown reason the pressure readings for this period were obviously too high. A correction of -.040 in. has been deduced by comparison with the readings at Sierra Leone and has been applied.
igi J January to 1915 May. The data for this period had been corrected to Mean Sea Level and have been brought back to a height of 22 ft . by a correction of -.023 in .

\section*{PORT ELIZARETH, SOUTH AFRICA}

Autiority.
Meteorological Office. Department of Irrigation, Pretoria, Union of South Africa.
Pressure.
Site: The height of the barometer cistern above Mean Sea Level was 18 I ft . throughout the period (iS86 to 1924).
Hours: The hour of observation was \(6 \frac{1}{2}\) h Greenwich Mean Time throughout the period.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -.029 in.
Temperiture.
Site: As for Pressure.
Metan: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.
Precipitation.
Site: As for Pressure.

> SALISBURY, RHODESIA

Authority:
The Hydrographic Engineer, Department of Agriculture, Salisbury, Rhodesia.
Pressure.
Site: 1897 Nay to 1902 September. Olservations taken by the Education Department, about 100 yards distant from present site and at the same height ( 4860 ft .). 1902 October to Igo8, November 7. Observations taken at the Native Hospital (now the Agricultural Department Offices) at same height ( 4860 ft .).
1908 November 7 to 1921 August. Observations taken at Salisbury (iaol at a height of 4825 ft .
1921 September to 1923. Observations taken at the Meteorological Office (old Native Hospital) at a height of 4860 ft .
The values from igo8 November 7 to 1921 August have been reduced to a height of 4860 ft . by applying a correction of -0.03 in .

The heights siven are derived from the Railway Levels. No precise levelling has been carried out in the Colony yet, but the altitudes of certain stations in the primary triangulation of the country were fixed by the Geodetic Survey by means of angular measurements and corrected to height above Mean Sea Level bench marks at Delagoa Bay, Port Natal, Algoa liay and Cape Town, with a probable error of \(\pm 15 \mathrm{ft}\). According to the Geodetic Survey level, the altitude of Salisbury station as derived from the railway levels is 45 ft . too high. The heights as given are therefore only approximate and may be from 30 to 60 ft . too great.
Instruments:
1897 May to 1900 November 19. Kew l'attern, 110. 2006.
1900 November 20. Kew P'attern, no. 2397.
1917 to 1921 Angust. Fortin Barometer M. O. no. 1331, with index error correction of +0.003 in .
The exact date of the installation of the Fortin barometer M. (). no. r33I is not known, but it was after igio and prior to igry and it appears probable that it may have been installed after the break in the records in igit.
1921 September to 1923. Rarometer and correction unknown.

The index error corrections to the two first instruments are not known, as the date at which barometer M. O. I.3.3 was brought into use is not known exactly. the index correction of +0.003 in . has been applied to the whole series up to Ig2I (August).
Houts: The observations were taken at \(9^{\mathrm{h}}\) (3oth meridian time) throughout the period.
Notes: Alf values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -0.055 in .
There may be some doubt as to the alsolute accuracy of the pressure record during the period in which it was taken at the Gaol.
Temperature.
Site:
1897 May to 1021 August. As for Pressure.
192 I September to 1923. Observations were continued at the Gaol.
E.rposure: Prior to 1911, the thermometers were exposed in a small sized Stevenson screen. After that date they were exposed under a thatched shelter in accordance with former Meteorological Office recommendations for use in the tropics.
Hours: The standard adopted is the mean between mean daily maximum and mean daily minimum.

\section*{TUNIS}

Lat. \(36^{\circ} 48^{\prime} \mathrm{N}\). Long. \(10^{\circ}\) io' E .
Pressure.
After a prolonged investigation, it was decided that the pressure data were not sufficiently reliable for inclusion.
Temperature.
Authorities:
1887 to 1908. Paris, Bureau Central Météorologique de France, Ammales.
1910. Manuscript data supplied by the Office National Météorologique, Paris.
1911-I3. Paris, Bureau Central Météorologique de France, Annales.
1914 to 1920. Manuscript data supplied by the Office National Météorologique, Paris, and filed in the Meteorological Office, London.
Sitc: The height above Mean Sea Level was:
\[
\begin{aligned}
& \text { 1887-1910 .................................................... } 111 \text {. } \\
& \text { 191I-1920 .................................................21 m. }
\end{aligned}
\]

Observations: All values have been corrected to the mean of 24 hours by corrections (Table A) based on hourly observations taken at Metlaoui, Tunis.
1887-1892 from \(\frac{1}{4}\left(7^{\mathrm{h}}+13^{\mathrm{h}}+19^{\mathrm{h}}+\frac{19^{\mathrm{h}}+\text { Min1. }}{2} 2\right)\)
1896-1897 from \(\frac{1}{2}\) (Max. + Min.)
1898 from \(\frac{1}{4}\left(7^{\mathrm{h}}+13^{\mathrm{h}}+19^{\mathrm{h}}+\frac{19^{\mathrm{h}}+\mathrm{Minn}_{2}}{2}{ }_{2}\right)\)

Z.INZIBAR, EAST AFRICA

Authority.
Indian Meteorological Department.
Pressure.
The height of the larometer from the beginning of observations to March 1905 was 57 ft . ; April 1905 , to date, 56 ft . A correction of + .oor was applied to reduce the former period to the present height of 72 ft . The data are the \(8^{\text {h }}\) readings.

\section*{ASIA}

\section*{ARABIA}

\section*{ADEN}

Height of barometer from start to date has been 94 ft . From 1880 to 1890 the observations were recorded at \(10^{\text {h }}\) and \(16^{\text {h }}\); from 1891 to date at \(8^{\text {h }}\) : the former series were reduced to the latter by applying the corrections contained in the India Meteorological Memoirs Vol. XVII, p. XXXI.

\section*{MUSCAT}

Slight shifts in the position of the themometers have taken place without corrections being applied to the temperature readings.

> CEYLON

\section*{GENERAL}

Although figures are given to the 31 place of decimals, it is not claimed that they are correct to 0.001 in. They ought in general to be more accurate than 0.01 so that it seems preferable to retain the 3d figure.

\section*{NOTES ON INDIVIDUAL STATIONS}

\section*{COLOMBO}

Height of barometer from start to October 1876 was \(42 \mathrm{ft} . ;\) November i876 to 1909, 40 ft .; January 1910 to date, 24 ft . The data are the means of \(9^{\mathrm{h}} 30^{\mathrm{m}}\) and \(15^{\mathrm{h}} 30^{\mathrm{m}}\) readings ; they were copied from tables received from the Superintendent, Colombo observatory, and are stated to have been reduced to the present height of 24 ft .

From January I, igio the data are from observations recorded at Colombo Observatory at a distance of about three miles from the original site of the observatory at Colombo Fort.

\section*{NUWARA ELIYA}

Height of barometer from start to August 1873 was 6240 ft ; September 1873 to \(1877,6150 \mathrm{ft}\); January 1878 to \(1896,6240 \mathrm{ft}\). ; January 1897 to date, 6188 ft . Corrections of \(+.045,-.033,+.045\) were applied to reduce the three former periods to the present height of 6188 ft . The data have been the means of \(9^{\mathrm{h}} 30^{\mathrm{m}}\) and \(15^{\mathrm{h}} 30^{\mathrm{m}}\) observations. The true altitudes of the points of observations are said by the superintendent, Colombo Observatory, to be uncertain.

\section*{TRINCOMALEE}

Height of barometer from start to September i885 was i75 ft.; October 1885 to September I894, 75 ft ; October 1894 to March 1910, 12 ft . ; April igio to date, 99 (98.6) ft. The data are the means of \(9^{\mathrm{h}} 30^{\mathrm{m}}\) and \(5^{\mathrm{h}} 30^{\mathrm{m}}\) readings ; they were copied from tables received from the Superintendent, Colombo Observatory, and are stated to have been reduced to the present height of 99 ft .

\section*{CHINA}

\section*{IIONGKONG}

Height of baroncter from start to date has been log ft. The data are the means of the hourly measures of the barograms, standardized by eye observations of the standard barometers.
ZI-KA-WAI

Details of changes in position of the barometer, thermometers and rain gage are not known.

\section*{INDIA}

\section*{GENERAL REMARKS}

\section*{Pressure.}

The pressure observations in the Indian tables have been corrected to \(32^{\circ} \mathrm{F}\)., to constant of gravity at I.at. \(45^{\circ}\), and to the present level of the barometer. The data available for the years \(1^{\text {revious }}\) to 1889 are the means of \(10^{\text {h }}\) and \(16^{\text {h }}\), local time, olservations; but in later years observations have in general been recorded only at \(8^{\text {h }}\), local time. Corrections taken from Ind. Metl. Memoirs Vol. XVII, have therefore been applied to the earlier data in order to make them comparable with the \(8^{h}\) data of later years.
Local time is used at all observatories, and the Indian standard time to which the \(8^{\text {h }}\) local time corresponds is given at the top of the respective tables.
Temperature.
The entries of temperature in the Indian tables are the means of the daily maximum and minimum temperatures.
Rainfall.
For a few stations rainfall measurements, which were made by the Provincial Governments before the establishment of the Meteorological Department's observatories, have been included in the tables, the year of change being noted in each case. Dashes in the tables indicate that the data are not, available and cannot reasonably be obtained by interpolation from neighboring stations.

NOTES ON DATA FROM INDIVIDUAL STATIONS
AHMADABAD
There was a change in the location of the rain gage and in the control of the rainfall registration in February 1893 but no correction was applied to the older rainfall readings on this account.

\section*{AKYAB}

Height of barometer from start to date has been 20 ft . From 1875 to 1888 the observations were recorded at \(10^{h_{2}}\) and \(16^{6^{h}}\), local time; from 1889 to date at \(\delta^{1 h}\) : the former series were reduced to the latter by applying the corrections contained in Ind. Meth. Memoirs Vol. XVII, p. XXVIII.

\section*{ALLAHABAD}

Height of barometer from start to December i885 was 307 ft ; January i 886 to date, 309 ft . Data up to 1902 were copied from the Ind. Metl. Memoirs Vol. XVI, where they were corrected to the present height of 309 ft . From 1875 to 1888 the observations were recorded at \(10^{h}\) and \(16^{17}\), local time; from 1889 to date at \(8^{h}\) : the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. There was a shift in the position of the thermometer shed in 1886 , but no correction has been applied on this account.

\section*{BANGALORE}

Height of barometer from 'start to July i 882 was 2982 ft . ; August I882 to December I892, 2983 ft . ; January 1893 to July I894, 3019 ft ; August 1894 to date, 3021 ft . Data up to 1902 were copied from Ind. Metl. Memoirs Vol. XVI. The observatory was shifted from the old site to the new one on January I, I894 and a correction of -.049 determined by over one year's comparative readings at the two sites was applied to the readings to make the two series homogeneous. No correction has been applied for the change of height from 3019 ft . to 302 Ift . which is apparently due to a redetermination of height and not to a shift of barometer. From 1875 to 1888 the observations were recorded at \(10^{h_{1}}\) and \(I 6^{h^{h}}\), local time; from 1889 to date at \(8^{h}\) : the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. No corrections were applied to the temperature and rainfall readings on account of the shift in the position of the observatory in I894.

\section*{BOMBAY (COLABA)}

Height of barometer from start to date was 37 ft . From 1847 to 1874 the data utilised were the means of 24 hourly readings; from 1875 to 1888 the means of \(10^{{ }^{11}}\) and \(16^{17}\), local time, observations; from 1889 to date the \(S^{\text {h }}\) readings. The former two series were reduced to the latter by applying the appropriate corrections derived from pages XXXIII and XXIX of the Ind. Metl. Memoirs Vol. XVII.

\section*{CALCUTTA (ALIPORE)}

Height of barometer from start to March 1877 was i8 ft.; April 1877 to date, 21 ft . Data up to 1902 were copied from the Ind. Metl.

Memoirs Vol. X \'I, where they were reduced to the present height of 21 ft . From 1855 to 1888 the olservations were recorded at \(10^{\text {h }}\) and \(16^{\text {h1 }}\), local time; from 1880 to date at \(8^{\text {lh }}\) : the former series were rednced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXVIlI. There was a change in the location of the rain gage and in the control of the rainfall registration in April 1875. hat no correction has heen applied to the older rainfall rearlings.

\section*{CHERRAPUNJI}

Height of barometer from start to date has heen 4309 ft . The data are the means of \(8^{\mathrm{h}}\), local time, readings. There was a change in the location of the rain gage and in the control of the rainfall registration in June 1902 but no correction was applied to the older rainfall readings on this account.

\section*{COCHIN}

Height of barometer from start to February 1801 was it ft . ; March 189 I to November 1906 . 10 ft ; Wecember 1906 to date, 9 ft . Data up to 1902 were given in the Ind. Metl. Memoirs, Vol. XVI, where they were reduced to the height of 10 ft . A further correction of +.00 r has been applied to all the readings mp to November igo6 to reduce them to the present height of 9 ft . From 1878 to 1888 the observations were recorded at \(10^{\text {h }}\) and \(16^{\mathrm{h}}\), local time; from 1889 to date at \(8^{\mathrm{h}}\) : the former series were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs I'ol. XVII, p. XXIX.

\section*{GAUHATI}

Height of barometer from start to November 1913 was i95 ft.; from December 1913 to date, 196 ft . The data are the means of \(8^{\mathrm{h}}\), local time, readings. A correction of -.OOI was applied from start to November igI 3 to reduce the readings to the present height. There was a change in the location of the rain gage and in the control of the rainfall registration in July igoz but no correction was applied to the older rainfall readings.

> IlYDERABAD (SIND)

Height of barometer from start to May 1885 was 94 ft ; June 1885 to March 1895, II7 ft ; April 1895 to date, 96 ft . Data up to 1902 were copied from the Ind. Metl. Memoirs Vol. XV'I, where they
were corrected to the present height of 96 ft . From 1877 to 1888 the obscrvations were recorded at \(10^{h_{1}}\) and \(16^{\text {h }}\), local time; from 1889 to date at \(\delta^{\mathrm{h}}\) : the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. The observatory was shifted in June i885, but no correction was applied to the temperature readings on this account.

\section*{JAIPUR}

Height of barometer from start to date has been 1431 ft . From IS8I to 1888 the observations were recorded at \(10^{\text {h }}\) and \(16^{\text {h }}\), local time; from 1889 to date at \(8^{\text {h }}\) : the former series were reduced to the latter by applying the corrections containerl in Ind. Metl. Memoirs Vol. NVII, p. XXX.

\section*{KALAT}

There was a change in the location of the rain gage and in the control of the rainfall registration in January 1893 but no correction was applied to the older rainfall readings on this account.

\section*{KARACHI}

Height of barometer from start to October 1895 was 49 ft . ; November i895 to May iS97, I2 ft.; June IS97 to June 1908, 30 ft . : July 1908 to date, 13 ft . Data up to 1902 were given in the Ind. Metl. Memoirs Vol. XV'l, where they were reduced to the height of 30 ft . A further correction of +.017 was applied from start to June 1908 to reduce all the data to the present height of 13 ft . From 1875 to 1888 the observations were recorded at \(10^{1_{1}}\) and \(16^{h}\), local time; 1889 to date at \(8^{\text {h }}\) : the former serics were reduced to the latter by applying the corrections containerl in the Ind. Metl. Memoirs Vol. XVII, p. XXIX. The position of the thermoneter shed was changed in November 1895, and was transferred to Manora, near Karachi, from July 1,1908 ; but no corrections have been applied to the temperature readings on account of these changes.

\section*{KODAIKANAL}

Height of barometer from start to date has been 7688 ft . The data are the means of \(8^{h}\), local time. readings.

\section*{LAHORE}

Height of barometer from start to December 1884 was 732 ft ; from January 1885 to date, 702 ft . Data up to 1902 were copied from
the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the present height of 702 ft . From 1875 to 1888 the observations were recorded at \(10^{h}\) and \(16^{h}\), local time; from 1889 to date at \(8^{\text {h }}\) : the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. The observatory was shifted to a distance of about + miles from the old site in January i 885 . No corrections have been applied to the temperature readings.

\section*{LEH}

Height of barometer from start to date has been \(11,503 \mathrm{ft}\). From 1875 to July \(189+\) the observations were recorded at \(10^{\text {h }}\) and \(16^{\text {h }}\), local time ; from August i894 to date at \(8^{\text {h }}\) : the former series were reduced to the latter hy applying the corrections contained in Ind. Metl. Memoirs Vol. X\II, p. XXIX.

\section*{MADRAS}

Height of barometer from start to date has been 22 ft . The data from I84I to 1867 were the means of 2.4 hourly observations; frons i 868 to 1888 the observations were recorded at \(10^{\mathrm{h}}\) and \(16^{\mathrm{h}}\), local time, and from i 889 to date at \(8^{h}\) : the former two series were reduced to the latter hy applying the appropriate corrections derived from pages XXXI and XXXV of the Ind. Metl. Memoirs Vol. XVII.

\section*{NAGPUR}

Height of barometer from start to December 1005 was 1025 ft : January igo6 to date, ioiz ft. A correction of +.008 was applied from start to December igo5 to reduce these readings to the present height of IoI7 ft . From 1869 to 1888 the observations were recorded at \(10^{h_{1}}\) and \(16^{6^{1}}\), local time; from 1889 to date at \(8^{\text {h }}\) : the former series were reduced to the latter by applying the corrections contained in Tnd. Metl. Memoirs Vol. XVII, p. XXX.

\section*{PORT BLAIR}

Height of larometer from start to March wos was 6i ft.; Xpril 1908 to June I920, 58 ft ; July ifzo to December I920, 59 ft . Data up to Igoz were given in the Ind. Metl. Memoirs Vol. XV'I, where they were for the height of 61 ft . Corrections of \(+.002,-.001\) were applied to the readings from start to March igos and from April 1908 to June iozo respectively, to reduce them to the present height of 59 ft . The observations from 1871 to 1888 were recorded \(10^{h_{1}}\) and
\(16^{\text {h }}\), local time; from 1889 to date at \(8^{\text {h }}\) : the former series were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXXI.

\section*{QUETTA}

Height of barometer from start to January i 886 was 5501 ft ; February 1886 to date, 5502 ft . Data up to 1902 were copied from the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the present height of 5502 ft . From 1879 to 1888 the observations were recorded at \(10^{h}\) and \(16^{h}\), local time; from 1889 to October 1912 at \(S^{\text {h }}\); from November 1912 to date at \(7^{11}\). The \(10^{h}\) and \(16^{h}\) data were reduced to the \(8^{h}\) equivalent by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. No correction has been applied to reduce the \(7^{\mathrm{h}}\) data to the \(8^{\mathrm{h}}\) series.

\section*{RANGOON}

Height of barometer from start to October 1902 was 41 ft. ; November 1902 to January 1906, 57 ft . February 1906 to February 1909. 36 ft . : March 1909 to date, i8 ft. Data up to 1902 were given in the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the height of 57 ft . Further corrections of +.039 from start to January 1906 and of +.018 from February igo6 to February 1909 were applied to reduce the whole series of data to the present height of is ft. From 1876 to i888 the observations were recorded at \(\mathrm{IO}^{\text {h }}\) and \(\mathrm{I}^{\text {h }}\), local time; from 1889 to date at \(\delta^{h}\) : the former series were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXVIII. There were shifts in the position of the thermometer shed in March 1902 and in 1906, but no corrections were applied to the thermometer readings.

\section*{SHILLONG}

Height of barometer from start to date has been 4020 ft . The data are the means of \(8^{\text {h }}\). local time, readings. There was a change in the location of the rain gage and in the control of the rainfall registration in June 1902 but no correction was applied to the older rainfall readings on this account.

\section*{SIMLA}

Height of barometer from start to February 1885 was 7012 ft : March 1885 to l'elmruary \(1889,7048 \mathrm{ft}\); March 1889 to March i8go,

7073 ft ; April 1890 to June \(1802,727+\mathrm{ft}\); July 1892 to November \(1908,722+\mathrm{ft}\); December 1908 to date. 7232 ft . Data up to 1902, reduced to the height of 7224 ft ., were published in the Ind. Metl. Memoirs Vol. XVI; to these as well as to the readings from 1903 to November igo8 a further correction of -.00S was applied to reduce them all to the present height of 7232 ft . From 1880 to 1888 the observations were recorded at \(10^{h 3}\) and \(16^{h}\). local time; from IS89 to date at \(\mathcal{S}^{11}\) : the former series were reduced to the latter ly applying the corrections contained in Int. Metl. Memoirs Vol. XVII, p. XXVIII. There was a shift in the position of the thermometer shed in April i890; but no correction on this account was applied to the temperature readings. The position of the rain gage has also been shifted several times withont any correction being applied on account of change of site.

\section*{WALTAIR (VIZAGAPAT.IM)}

Height of barometer from start to January 1899 was 3 I ft. ; February 1899 to July \(1918,226 \mathrm{ft}\) : August 1918 to date, 38 ft . Data 1 p . to 1902 were given in the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the height of 226 feet by applying a correction of -.200 determined by comparative readings taken at the two sites. A further correction of +.192 due to the second change of site was applied to all these data together with those of the period extending up to July 1918 to reduce the readings to the latest height of 38 ft . From 1875 to 1888 the observations were recorded at \(10^{h}\) and \(16^{11}\). local time; from 1889 to date at \(8^{h}\). The former were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXX. The olservatory was removed from Vizagapatam to Waltair, a distance of abont + miles, in February 1899 and again from Waitair to \izagapatan in August igI8. Temperature and rainfall figures up to June \(189 y\) are for Vizagapatam, from July 1899 to August 1g18 for Waltair and thereafter again for Vizagapatam. No corrections were applied to these readings on account of these changes.

> INDO-CIIINA

\section*{MONCAY}

Height of barometer from start to date has been 9 m . The data are the means of \(10^{17}\) and \(16^{1 / 2}\) readings.

\section*{NHATRANG}

Height of barometer from start to date has been 3.6 m . The data are the means of \(10^{h}\) and \(16^{h}\) readings.

\section*{PHU LIEN}

Height of barometer from start to date has been 115.6 m . The data are the means of observations taken at intervals of two hours.

\section*{SAIGON}

Height of barometer from start to date has been ir m. The data are the means of \(10^{\text {h }}\) and \(16^{h}\) readings.

> IRAQ

\section*{BAGHDAD}

Height of barometer from start to December 1917 was 127 ft .; January 1918 to October 1918, 120 ft . ; November 1918 to date, 125 ft . Corrections of +.002 and -.005 were applied respectively to the data of the former periods to reduce them to the present height of 125 ft . From 1896 to 1905 the observations were recorded at \(8^{\text {h }}\); from 1906 to 1914 they have been \(7^{\text {h }}\) readings during the winter months, November to March, and \(8^{\text {h }}\) readings during the remaining months. During 1917 the observations were taken at \(8^{\text {h }}\); during January and February 1918 at \(6 \frac{1}{2}\) h and from March 1918 to date at \(7^{\text {h }}\) throughout the year. No correction has been applied to reduce the \(\gamma^{\mathrm{h}}\) readings to the \(8^{\mathrm{h}}\) equivalents.

\section*{BUSRAII}

Several changes in the position of the thermometers have taken place without corrections being applied to the temperature readings.

> JAPAN

Owing to the destruction of records in the lig fire cansed by the earthquake of 1923, the data for Japan are not as mumerons as they would otherwise be.

PERSIA
buthire
Height of barometer from start to July 1800 was 25 ft . : August 1890 to October 1890 , 29 ft .; November 1890 to date, 14 ft . Data
up to 1902 were copical from the lud. Meth. Mennoirs Vol. NV V , where they were reduced to the present height of it 4 ft . lirom is f 8 to 1888 the observations were recorded at \(10^{14}\) and \(1 \sigma^{12}\); from 1889 to November 1905 at \(8^{11}\) and from December \(r ; 05\) to date at \(7^{h}\) during the winter months, November to March, and at \(\delta^{\mathrm{h}}\) during the other months. The \(10^{h}\) and \(16^{\text {h }}\) data were reduced to the \(8^{h}\) series by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, P. XXXI: but no correction was applied to reduce the \(7^{\text {h }}\) readings to the \(S^{1 /}\) equivalents.

\section*{JASK}

Height of barometer from start to date has been 13 ft . The data from start to January iglo were the means of \(S^{h}\) observations: from February 1910 to date they have been \(7^{\text {h }}\) readings. No correction was applied to reduce the latter to the former series.

\section*{SIBERIA}

\section*{GENERAL REMARKS}

The following is an extract from a letter from the late Director of the Central Physical (O)servatory, Leningrad, dated June 20, 1925:

We are sorry not to be able to give you the values of pressure for the stations: Vladivostok, Novo- Mariinsky Post, Blagovieshtchensky Priisk, Ust Mayskoye and Turukhansk, the records of same as regards pressure being not trnstwortly enough. Up to 188i homogeneous series of observations in the Asiatic part of the Union are very scarce and beside that in most eases it proved to be almost impossible to establish their complete homogeneity within this period of time. These considerations led us to the decision to give you the data only since 188 r.
The data relating to the period 1881-1915 were controlled by means of every method at our disposal ; by the method of differences, by the dressing up of mean annual isobars, by the examination of the ammal clange, by computing the departures from the mean deducted from a long range of years, etc. This work was made in connection with two extensive monographs (which are in preparation) of Prof. A. A. Kaminsky as regards pressure of the air, and of the Senior Physicist Engenie Rubinstein as regards temperature. In the "Annales de l'Observatoire Physique Central" for 1907 and 1900 indications concerning the detcrinination of absolute heights of the barometers at the meteorological stations in the Russian dominions in Asia were given in a supplement to a previous paper of Prof. Kaminsky treating this subject (Memoirs of the Russian Academy of Sciences, v. XIl N. 2). The whole series of observations relating to pressure were effected by means of mercury barometers the correction of which in accordance with the normal barometers of the Central Geophys. Observatory were periodically made at
the stations by the inspectors of the Central Geophys. Observatory. These corrections were applied to the data of Observations.

In the enclosed tables of the data of pressure are reduced to \(0{ }^{\circ} \mathrm{C}\), and the Lat. of \(45^{\circ}\). Beside that the data of all stations are reduced to the same altitude. The mean diurnal pressure was deducted from observations made three times a day ; \(7^{\text {h }}\) a. m., \(1^{\text {h }}\) p. m. and \(9^{\text {h }} \mathrm{p} . \mathrm{m}\). according to the formula
\[
\frac{7^{11}+13^{h}+21^{1}}{3}
\]

The mean diurnal temperature was deducted from observations made at \(7^{n}\) a. m., \(I^{n}\) p. m., and \(9^{h}\) p. m. according to the formula
\[
\frac{7^{\mathrm{n}}+13^{\mathrm{n}}+2 \mathrm{I}^{\mathrm{n}}}{3}
\]

All the monthly mean values were corrected according to the corrections quoted in the work of H. Wild "Temperatur-Verhältnisse des Russischen Reiches" for the purpose of identifying them with the mean values of hourly observations
\[
\frac{\left(1^{\mathrm{a}}+2^{\mathrm{a}}+\ldots+24^{\mathrm{h}}\right)}{24}
\]

The mean temperatures of all stations are reduced to the same * altitude. the change of temperature with the height being admitted as being equal to \(-0.6{ }^{\circ} \mathrm{C}\). for every 100 m .

The data of pressure, temperature, and precipitation relating to the same stations for the period 1916-1920 have not as yet been delivered to the Central Geophys. Observatory.

\section*{NOTES ON INDIVIDUAL STATIONS \\ IRKUTSK}
" The height 465.6 m . was adopted only temporarily in 1914 for the time when the barometer was removed for several months (Sept.-Dec.) from its permanent place into a temporary apartment. After its instalment into a new permanent place its height was determined as being equal to 467.0 m . This height has to be considered as the true one since December 17, 1914. Up to 1914 its height was also equal to 467.0 . Monthly values from January 1916 to June 1924 have been extracted from data sent from the (entral Observatory, Lemingrad, to the Simla Metl. Office in June 1925."

\section*{SYRIA}

\section*{BEIRUT}

Height of barometer from start to date is said to have varied from 33.7 m . to 40 m . The data were reduced to the station level from the sea level equivalents by applying a uniform correction of -3.0 mm . Temperature data are the means of three daily readings taken at \(8 \frac{1}{2}\), \(142^{\frac{1 \mathrm{~h}}{2}}\) and \(202_{2}^{1 \mathrm{~h}}\) standard time of 30th E. meridian.

\footnotetext{
* This is the altitude at the top of the table: it is not the same for all stations. [Editor.]
}

\section*{AUSTRALAA \\ ADELAIIDE, SOUTH AUSTRALIA}

Authority.
Central Bureau of Meteorology, Melbourne, Australia.
Site: During the first year or two, olservations were made at Sir Charles Todd's private residence in Adelaide and North Adclaide, and for some months in the Government House grounds, until May, I 860, when the present observatory building was completed and the instruments were transferred to their present site.

Pressure.
Site:
I856 to 1860 May. No records are available of the height of the barometer and the corrections applied to reduce the readings to Mean Sea Level.
1860 June to 1924. Height of barometer above Mean Sea Level ifo ft. The values have been corrected to Mean Sea Level.
Hours: The values are the means of observations at \(9^{h}\) and \(15^{\text {b }}\).
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) )
Temperature.
Exposurc: The thermometers were exposed throughout in a modified improved form of the thermometer stand used at Greenwich, the instruments being about 5 ft .6 in . from the ground and well protected from the sun1 and rain and screened from the sky but wtherwise fully exposed to currents of air.
Hours: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

\section*{Precipitation.}

Site:
I 839 to I860 May. The records were taken at the residence of Sir George Kingston in Grote St.
r 860 June to 1924. At the Observatory.
The records at Grote St. were continued until November I879 so that for over i9 years the two sets of observations were concurrent. During this period the average annual difference between the two gages
was 0.26 in . Moreover the sites were only between 400 and 500 yards apart, so that the two records combined give a continuous and practically uniform register of the Adelaide rainfall from 1839 to the present date.

\section*{ALICE SPRINGS, SOLTTH AUSTRALIA}

\section*{Authority.}

Central Bureau of Meteorology, Melbourne, Australia. Pressure.

Site: The height of the barometer above Mean Sea Level was 1926 ft . throughout the period ( 1885 to 1923 ).
Instruments:
1885 to 1890 August. A baroneter with an index error correction of -.013 in . was in use.
I891 March to 1923. A barometer with an index error correction of + .ool in. was in use.
Hours: The values are the means of observations at \(9^{h 1}\) and \({ }^{1} 5^{\mathrm{h}}\), local time.
Note: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ).
Temperature.
Mean: The standard adopted is the mean between the mean daily maximum and mean daily minimum.
Precipitation.
Site: As for I'ressure.

\section*{BRISBANE, QUEENSLAND}

Authority:
Central Bureau of Metcorology, Melbourne, Atstralia.
Pressure.
Sitc: The height of the barometer above Mean sea Level was:
I 887 January to I911 July........ . . . . . . . . . . . . . . . . 37 ft.
igi A August to i9i8, July ii ........................ . . 38 ft .
19 I8 July 12 to 1924 . . . . . . . . . . . . . . . . . . . . . . . . . 25 ft.
All values have been corrected to Nean Sea Level.
Hours: The values are the means of observations taken at \(9^{h}\) and \(15^{\text {h }}\).
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) )

Temperature.
Mean: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

\section*{Precipitation.}

Site: The observations were made at Wickham Terrace througlout the period.

\section*{DARWIN, WEST AUSTRALJA}

Authoriti:
Central Bureau of Meteorology, Melbourne, Australia.
Pressure.
Site: The height of the barometer above Mean Sea Level was 97 ft . throughout the period ( \(\mathrm{IS82}\) to 1924).
Hours: The values are the means of olservations at \(9^{\text {h }}\) and \(15^{\text {h }}\).
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ), and to Mean Sea Level.
Temperature.
Exposure:
1882 to 1894, March 16. The thermometers were exposed in a modified form of the thermometer screen used at Greenwich, and which was similar to that in use at Adelaide (q. v.).
\(189+\) Narch I7 to 1924. An enlarged Stevenson screen of the pattern now adopted by the Commonwealth Meteorological Bureau was substituted.
Mran: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

\section*{Precipitation.}

Site: The olservations have been taken in the grounds of the Post and Telegraph Office throughout the period.
dUNEDIN, NEIV ZEALAND
Authoriti:
Dominion Meteorological Office, Wellington, New Zealand.
Pressures.
Site: The standard harometer is at the Post Office at a height of 40 ft . above Mean Sea Level ( 1864 to 1923).
Hours: The ollservations are at \(9^{\text {h }}\) throughout the period.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of +.003 in., and to Mean Sea I .evel.

Temperature.
Site: Dunedin has had rather a checkered career. In the early days it was three miles from the sea, and the height was given as 550 ft . above Mean Sea Level. This was altered to 500 ft . in 1874 . In 1892 the Observatory was removed, and the altitude was given as 300 ft ., until 1913 when it was again removed, from the Leith Valley to the Caretaker's residence in the Park, two miles from the sea, and the altitude is given as 250 ft . above Mean Sea Level.
Hours: The standard adopted is the mean of the mean daily maximum and mean daily minimum temperatures.
Precipitation.
It was decided that the rainfall records for Dinedin were not sufficiently homogeneous for inclusion.

\section*{SYDNEY, NEHT SOUTH WALES}

Autiority.
Central Bureau of Meteorology, Melbourne, Australia.
Pressure.
Site: The height of the barometer above Nean Sea Level was:

i917 April is to I922, June 19....................... . . . 33 ft .

All values have been reduced to Mean Sea Level.
Instrument:
IS59 to 1909 Newman \& Tornaghi barometer.
Ig10 to 1924 Wild-Fuess barometer.
Hours: The values are hourly means.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ).
Temperature.
Instrmments and Exposure: The thermometers were exposed in. a lonvred shed with a conical roof until 1909 or IgIo and in a large Stevenson screen since that clate.
Mean: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

\section*{Precipitation.}

Site: The early rain records were begun at South Head, 5 miles from the city in April, 1840 , and continued there
until I 855 . Records were taken from 1856 to 1859 at Petersham, and from that year to date at the Observatory site.
Instrument: An S-inch rain gage has been in use throughout the period.

> EUROIE
> AUS゙TRIA
> WIEN (VIENNA)

Site.
From January i851 to August 1852 the observations were made at the University Astronomical Observatory within the city. From September i852 to April 1872 they were made at the first location of the Central Meteorological Office (Favoritenstrasse \(30, \mathrm{H}_{\mathrm{b}}=19+.2 \mathrm{~m}\).). Since May I 872 they were made at Hohe Warte.
Pressure.
The height of the barometer above sea level was from September 1852 to April 1872, 194.2 11. (O) the 34 of May 1899 the l)arometer was removed from the "Parterre" in the first story of the Institute. 207.6 m. . to its present level. The entire series of observations are reduced to 202.5 m .
Temperature.
The values from i821 to 1850 are taken from: J. von Hann, Meteorologie von Wien, Denkschriften d. Akad d. Wissensch., 73. Band, igor.
The observations at the sites given above have all been reduced to the present location at Hohe Warte 38 .
1'rectipitation.
The observations from 1851 to 1852 were corrected to those from 1853 to 1872 and these are strictly comparable with the later values after 1872.

\section*{BRITISIT EMIIRE}

ABFRDEEN OBSERV ATORY
\[
\text { Lat. } 57^{\circ} 10^{\prime} \mathrm{N} . \operatorname{Iong} .2^{\circ} \mathrm{K}^{\prime} \mathrm{W} \text {. }
\]

Site.
The Observatory, which was established in 1868 , is on the north side of King's College, in ()ld Aberdeen. 'The College lies on a plain gradually rising from the sea from which it is
distant about I mile. There are no serious irregularities of surface in the vicinity excepting the two river valleys of the Don and Dee. To the north, at a distance of about I km. the Don flows eastwards to the sea; the Dee flows into the sea at a distance of about 3 km . to the south-east of the College. Between the college and the sea is a golf course covered for the most part with grass. Westwards is the High Street of the Old Town and beyond this there is another street. Further west, grass pasture extends for about one kilometer. Southward are open spaces beyond which the modern town is reached. The enclosure in which the Stevenson screen, the Beckley and check rain gages and the grass minimum thermometer are exposed, lies to the north-east of the Observatory at a distance of about 50 m . The "Northwall" screen in which the recording thermometers are exposed is erected on the wail outside the north window of the uppermost story of the observatory. The nature of the soil and sub-soil is loam and sand.
Pressure.
The monthly and annual means of pressure are the means of the values published in the Daily Weather Report and refer to the telegraphic station at Aberdeen. The telegraphic station was in the town of Aberdeen from 1860 until 1888 when the telegraphic work was transferred to the Observatory. The telegraphic readings were made at \(8^{h}\) to June rgo8, then at \(7^{h}\). Corrections have been applied to the earlier figures to reduce them to \(7^{12}\). The present height of the barometer above mean sea level is 26.8 m . All means refer to \(7^{\mathrm{h}}\) and have been reduced to \(32^{\circ}\) F., Mean Sea Level and corrected for gravity by reduction to Lat. \(45^{\circ}\).
Temperature.
The monthly and amual means of dry bulb temperature are the values published in the Quarterly Weather Report 187ıi8So (inclusive) and in Hourly Readings iS8i-I920. They are derived from hourly tabulations of the records of the photographic thermograph which is situated in a north-wall screen on the uppermost story of the Observatory. The height of the thermometer bulb above the ground is 12.5 m . Rainfalif.

The rainfall totals are taken from the following sources:
1871-1880 Terminal Hour \(24^{\text {h }}\). Hourly Tabulations (manuscript).
188i-1920 Terminal Thour \(24^{\text {h }}\). Hourly Readings.

The totals are derived from the records of a lieckley self-registering rain gage at King's College about 50 m . to the north-east of the Observatory Tower.
The heights of the barometer, thermoneter ancl rain gage are given at the heads of the appropriate tables.

\section*{GIBRALTAR}
\[
\text { Lat. } 36^{\circ} 6^{\prime} \mathrm{N} \text {. Long. } 5^{\circ} 21^{\prime} \mathrm{W} \text {. }
\]

Height of Barometer Cistern above Mean Sea Level 53 ft .
Meteorological olservations were commenced at Gibraltar in February 1852 under the direction of the Commanding Officer of the Royal Engineers. Observations were taken twice daily, at \(9.30 \mathrm{a} . \mathrm{m}\). and 3.30 p. 111. Local Time.

On April 1,1862 the instruments were transferred to the Semior Officer of the Army Medical Department, the hours of olservation being altered to 9 a. m. and 3 13. m. Local Time.

At the beginning of July igos three observations were taken each day, i. \(e\). , at 7 a. m., I p. m. and 9 p. 1m. (ireenwich Mean Time.

No observations were published for April iS62 or December istoz and the original schedules are said to have been destroyed. For is641865 only the printed abstracts in "Meteorological Observations at Foreign ancl Colonial Stations" (M. O. Official Publication No. 83) exist, the original returns for these years also having been destroyed.

\section*{Pressure.}

From August-()ctober 1855 the original returns are missing, as is also the return for December 18,2.
Barometer readings from Feloruary is52- Ime 1855 were taken with Barometer 50 P by Barrow \& ( \(\%\). (Index and Capillary correction + .oi i in.), the height of the haroncter cistern being 46 ft . above Mean Sea Level.
Ster July 19 , i 855 readings were taken from the barometer in the Garrison Library " which has no correction, is made by Cox, London and fixed 75 ft . above Mean Sea Level."
Barometer 50 P by Barrow was repaired and taken into use again on March io, 1856, the correction for index and capillary action now being +.01 .3 in . while the height above Mean Sea Level remained at 46 ft .
In January I S6I Barometer 1.5 made by barrow was used, this instrument was fixed at a height oi 5.3 ft . above Mean Sea Level its index, etc. correction being +.00 in.

Barometer No. 7 by Negretti \& Zambra (index, etc. correction +.018 in.) was used from January i866 until February 1872 when Barometer A. M. D. No. 26 replaced it.
Fortin Barometer A. M. D. No. 26 fixed at a height of 53 ft . above Mean Sea Level continued to be used for the observations until December 17, 1912, when a Kew Pattern Barometer No. M. O. 1242 was substituted. The correction for index error and capillary action of Bar. A. M. D. No. 26 was stated in 1872 to be -.016 in . and this correction has been applied to all hitherto published values. The station at Gibraltar was inspected in September 1912 by an official of the Meteorological Office London who found that the index etc. correction of Bar. A. M. D. No. 26 was then +.053 in . A comparison of Cape Spartel and Gibraltar pressure data for the period i895-1920 confirms the inspection report. Moreover, it appears that by i 895 the correction had changed from -.OI6 in, to +.013 in . Discontinuities appear at the end of 1897 and in November 1898 , after which the correction +.053 in . is appropriate. The following adjustments for index error have therefore been used in computing the data:

All values have been reduced to a common height of 53 ft . by the application of corrections as shown below.

Jall. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. Year Feb. 1852-July 1855 and March 1856-Dec. 1860
\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|c|c|c|c|}

\hline
\end{tabular}

In addition an adjustment has been made to the individual readings for the period Felruary i852-June igo 8 when only two observations were taken each day in order to reduce them to \(\frac{1}{3}\left(7^{h}+13^{h}+21^{h}\right)\). The corrections were deduced from Lisbon pressure data iSoo-1919 given by Lima in "O Clima de Portugal Continental" and are as follows:
\[
\begin{array}{cccccccccccccc} 
& \text { Jan. } & \text { Feb. Mar. } & \text { Apr. May June } & \text { Jul. } & \text { Sug. Sept. } & \text { Oct. Nov. } & \text { Dec. Year } \\
& - & + & + & + & + & + & + & + & + & + & + & - & + \\
\text { Inches } & .005 & .003 & .001 & .007 & .003 & .004 & .001 & .009 & .003 & .001 & .001 & .006 & .003
\end{array}
\]

The Gibraltar pressure data are therefore monthly and annual means (expressed in inches of mercury) for the period I8521920 reduced to \(32^{\circ} \mathrm{F}\). and Lat. \(45^{\circ}\).
1 feight of Barometer cistern 53 ft . above Mean Sea Level.
Hours of Observation \(7^{\mathrm{h}}, 13^{\mathrm{h}}\). and \(21^{\mathrm{h}}\) Greenwich Mean Time.
These data have been computed directly from the original returns.
Temperature data shown have been computed directly from the
original returns and are monthly and annual means in degrees Fahreuheit for the period 1852-1920.
Rainfall.
From August-()ctoler 1855 and for December 1872 the original returns are missing.
Data are missing for the period September-Novenber 1878 when the Observatory was under repair.
Up to 1874 readings from a gage exposed 25 ft . above the ground were made in addition to those from the gage on the ground. Data for April, June, September and October IS64 were interpolated using the readings from the 25 ft . gage which during the period \(1866-74\) gave totals approximately io per cent less than the gage on the ground.
Rainfall data shown are monthly and annual totals, in inches, for the period \(1852-1920\) computed directly from the original returns.
From February 1852-March 1862 gage was read at 9.30 a. 111 .
From April \(1862-\) June 1908 gage was read at 9 a. m .
After July I, igo8 readings were made at \(\gamma^{\text {h }}\) Greenwich Mean Time.
Temperature.
From August-October 1855 the original returns are missing, also for December 1872.
In April, May, June 1853 the maximum thermmeter was unservicealle, in January 1857 the minimum thermometer was broken. The minimun thermometer was also out of order in October 1876 . Data are missing for September to November 1878 and also for December 1884 .
The values shown from Feloruary I 852 to December 1903 are deduced from \(\frac{1}{2}(\) maximum + minimum), these latter referring to periods of \(2+\) hours ending at the hour of the morning observation. They have leen corrected to \(\frac{1}{4}\left(7^{\text {h }}+13^{\text {h }}+\right.\) \(2 \times 2 \mathrm{I}^{\mathrm{h}}\) ) by means of correction A , which is based on data for the years igil to 1020 .

It was found in August 19I I that there was an error of \(10^{\circ} \mathrm{F}\). in the minimum themometer owing to the condensation of spirit at the top of the tube. The evaporation of the spirit into the upper part of the tube appeared to have been going on gradually since 1904 .
For the period January 1904 to June 1908 values of \(\frac{1}{2}\left(9^{h}+\right.\) \(15^{\mathrm{h}}\) ) reduced to \(\frac{1}{4}\left(2^{\mathrm{h}}+13^{\mathrm{h}}+2 \times 21^{\mathrm{h}}\right)\) by correction B are shown. In July 1908 three observations each day were taken and the values given from July 1908 until December 1920 representing true mean temperatures were obtained by the formula \(\frac{1}{1}\left(7^{h}+13^{h}+\left(2 \times 21^{\mathrm{h}}\right)\right)\).
\({ }^{\circ} \mathrm{F}\).

Temperature data shown have been computed directly from the original returns and are monthly and annual means in degrees fahrenheit for the period 1852-1920.

\section*{GREENWICH METEOROLOGICAL AND MAGNETIC OBSERVATORY}

Authority.
Meteorological Office, London, England.
Site.
The Meteorological and Magnetic Observatory is situated in Greenwich Park, about \(\frac{1}{2}\) mile ( 0.8 km .) south of the Thanes, on an elevated piece of ground sloping steeply to the north and west and less steeply to the east and commanding extensive views of London, the Thames Valley and the plain of Essex.
I'ressure.
The pressure means are taken from " Reduction of Greenwich Meteorological Observations, Parts I and 11, 1854-18-6", and from " Greenwich Magnetical and Meteorological Observations" Annual Volumes 18ラ7-1920. All means are derived from hourly tabulations of the records of the photographic barograph standardized by eye observations of the standard barometer after correction for temperature but not for gravity or height above sea level. In April igi7 the standard barometer was transferred to the New Magneto-
graph House, the new height being 46.4 m . above sea level. Accordingly, all means published since April igI7 have been decreased by .oo 8 in . to reduce to the former height of 48.5 im. above sea level. All means therefore refer to a height of 48.5 m . above sea level. They have been reduced to \(32^{\circ} \mathrm{F}\). but the correction for gravity by reduction to latitude \(45^{\circ}\) has not been applied.
Temperature.
The monthly means of dry bull temperature for \(\mathrm{I}_{4} 1\) to 1905 are taken from "Reduction of Greenwich Observations" Parts III and IV, and for the remaining years, from "Greenwich Magnetic and Meteorological Observations" Annual \(\backslash\) 'olumes. The revolving stand upon which are mounted the dry and wet bulb thermometers employed for standardizing the photographic temperature curves was first erected in March is4i. The observations for previous months were made with a thermometer suspended in a temporary manner. The monthly means for the period April isfr-December 1847 are means of 12 symmetrically disturbed eye-observations and of 6 eye-observations for 1848 . From 1849 , the monthly means are means of hourly values derived from records of the photographic thermograph reduced by means of the readings of the revolving stand dry-bulb thermometer. In January 1899 the revolving stand was moved from its position in the Observatory grounds to an open position in the Magnetic Pavilion enclosure. The Magnetic Pavilion is about 320 m . ( 350 yards) to the east of the Magnetic and Meteorological Observatory. Minor changes in site occurred in 1863 and 1846.
Rainfall.
The rainfall totals for iS4I-I9I4 are taken from "British Rainfall I9I5" Part I, pp. 36-37 and for the remaining years from the Monthly Weather Reports of the British Meteorological Office. Less reliable data for about 26 years earlier than I841 will also be found in "British Rainfall igi5." The rainfall is measured daily at \(9^{\mathrm{h}}, 15^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\) Greenwich Mean Time in an \(8^{\prime \prime}\) gage whose surface is 5 in . ( 12.7 cm .) above ground. The continuous record of Osler's self-registering rain gage shows whether the amounts at \(9^{h_{1}}\) are to be placed to the same or to the preceding civil day; the amounts thus adjusted refer therefore to the civil day ( \(0^{h}\) to \(24^{\text {h }}\) ). At the beginning of 1899 , the gage was moved
to the Magnetic Pavilion enclosure. It occupies a position about 366 m . ( 400 yards) to the east of its former site and about 3.05 m . ( 10 ft .) north-west of the thermometer stand. The height of the gage was found to be 1.75 m . less than in its old position in the Observatory grounds. Its present height is 45.6 m . ( \(149^{\prime} 6^{\prime \prime}\) ) above Mean Sea Level. The gages are read at midnight on the last day of each calendar month.
The monthly totals for 1867 and 1868 are those recorded by a monthly \(8^{\prime \prime}\) gage.
Fiurther details regarding the exposure and site of the barometer, thermometer and rain gage will be found in the annual voltmes already referred to.

> VALENCIA OBSERVATORY
> (Cahirciveen, Co. Kerry, Ireland)
\[
\text { Lat. } 51^{\circ} 56^{\prime} \mathrm{N} \text {. Long. } 10^{\circ}{ }^{1} 5^{\prime} \mathrm{W} \text {. }
\]

Site.
Valencia Observatory derives its name from the fact that it was originally established on Valencia Island in 1867 . It was removed to the mainland in March IS92, and now lies in a direct line between the old site on Valencia Island and the town of Cahirciveen, about \(2 \frac{1}{2}\) miles ( 4 km .) north-east from the former, and three-quarters of a mile ( I km.) southwest of the latter. It is quite remote from any other buildings. The general character of the country surrounding the Observatory is hilly. The eastern bank of the Cahir river is about 150 m . to the westward, and in that direction there is no very high ground between the Observatory and the open sea, some \(3 \frac{1}{2}\) miles ( 6 km.) away. To the north-west, however, are hills varying in height from 400 ( 120 m .) to 900 ft. (275 m.), the highest heing less than 3 miles ( 5 km .) distant. These are only separated by a narrow gully running in a NNW direction from other hills equally high, which stretch away to the northward ; the nearest of these is but little more than a mile ( \(1 \frac{1}{2}\) knn.) from the Observatory. Beyond the town of Cahirciveen to the north-east the river opens out considerably, and the country in this direction becomes an open boggy basin, rising by only a gentle gradient. Southward of this, however, it soon rises again, and at about a mile south-east of the Observatory it culminates in a hill
upwards of 1245 ft . ( 380 mm .) in height. Still further south it opens out once more to a distance of nearly 5 miles ( 8 km .) from the Observatory, where there is a range of hills rimning east and west, and varying in height from 400 ft . ( 120 m. ) to 1300 ft . ( 400 m .). To the south-west there is an opening to the sea, between Valencia Island and the mainland ; and the circle of hills is completed by those on the island itself, the highest of which is about 800 ft . ( 240 m .) high, and bears about west-sonthwest from the Observatory. I'ressure.

The pressure means are the means of the values published in the Daily Weather Report. All means refer to \(7^{h}\) and have been rednced to mean sea level, \(32^{\circ} \mathrm{F}\). and Lat. \(45^{\circ}\). Up to March 1892 the barometer was at a height of 7 m . above mean sea level, since then it has been at a height of I 3.7 m . The telegraphic readings were made at \(8^{\text {h }}\) to June igo8, then at \(7^{h}\). Corrections have therefore been applied to the earlier figures to reduce them to \(7^{h}\).
Temperature.
The means of dry luill, temperature are the values published in the Quarterly Weather Report i 869 to 1880 inclusive and in Hourly Readings i881-1920. They are derived from hourly tabulations of the records of the photographic thermograph. The thermometer bullos are exposed in a north-wall sereen and are 1.3 m . above ground. Prior to the change of site in Warch 1802 , the themometer bullos were 1.2 11. above the ground.
Rainfall.
The rainfall totals are taken from the following sonirces:
187-I880 Terminal Hour \(24^{17}\). Hourly Tabulations (mantiscript).
i88-i920 Terminal Hour \(24^{\text {h }}\). Hourly Readings.
The totals are derived from the records of the Beckley rain gage. The latter instrument was dismantled at the Old (O)servatory on March 18 . 1892 , at 2 p . 111 . and restarted at the new observatory on March 19 at \(12.40 \mathrm{p} . \mathrm{m}\). There was 110 rain during the interval. Rainfall totals for earlier years (1866-1870) are given in the Quarterly Weather Report I 870 Appendix III, p. II, but as these refer to two different gages on Valencia Island, and in the case of the years i86y and i870 to a Cilaisher gage on a wall 1.5 m . above the grountl, they have not been included in the tables. The heights above ground
and above Mean Sea Level before and after the change are given at the head of the rainfall table.
The Beckley gage and the 8 -inch check gage are in a railed off enclosure about 40 m . to the north of the Observatory buildings.
The area of the Beckley gage funnel is 102.3 sq. in. The ground on which the gages stand slopes generally downwards towards the west-northwest at an inclination of about I in 20.
The heights of the barometer, thermometers and rain gages are given at the heads of the appropriate tables.

Sept. I. i 820 to May 3I, ISGo-Botanical Garden.
June 1. I 860 to Dec. 3r, 1920-Agricultural high school.

\section*{GERMANY}

BERLIN
Pressure.
Hours: From i88i to 1886 observations were taken at \(6^{\text {h }}\), I \(^{\text {h }}\) and \(22^{\mathrm{h}}\) and from 1887 to 1920 at \(7^{\mathrm{h}}, 14^{\mathrm{h}}\) and \(21^{\mathrm{h}}\). The means are obtained from these observations divided by 3 .
Temperature.
Hours: The means were derived from the following combination of hours: from \(1760-1786, \frac{1}{3}\left(7^{h}+14^{\frac{1}{2}}+22^{h}\right)\) in summer and \(\frac{1}{3}\left(8^{h}+14_{2}^{1 \mathrm{~h}}+22^{h}\right)\) in winter; from \(178_{7}\) to 182 I , \(\frac{1}{3}\left(8^{h}+13^{h}+23^{h}\right)\); from 1822 to \(1840, \frac{1}{4}\left(8^{h}+14^{h}+22^{h}+\right.\) \(22^{\mathrm{h}}\) ) ; from \(18+1\) to \(1847, \frac{1}{2}\) (max. + min.) reduced to \(\frac{1}{3}\) \(\left(6^{h}+14^{h}+22^{h}\right)\) by means of simultaneous observations: from \(18+8\) to \(1886, \frac{1}{3}\left(6^{h}+14^{h}+22^{h}\right)\); from 1887 to 1920 , \(\frac{1}{4}\left(7^{h}+14^{h}+2 \mathrm{I}^{\mathrm{h}}+2 \mathrm{I}^{\mathrm{h}}\right)\).
Homogencity: A detailed study of the homogeneity of the Berlin temperature observations was made by Dr. Hellman and published in " Das Klima von Berlin," Kgl. Preuss. Meteor. Inst., Bd. III, Nr. 6. The mean valnes from 1787 to 1821 were taken from the original.
Errors: The values from 1805 to 1817 are slightly too low. From 1873 to 1883 they are about 0.02 C . too high and in 1887 about 0.02 C . too low.

Height of the thermometers: After April \(\mathrm{I}, 1883, \mathrm{~h}_{\mathrm{t}}=10.2 \mathrm{~m}\).; after April \(1,1886, h_{t}=13.5\) (thermometer screened) ; after April 1 , IgIO, \(h_{t}=2 \mathrm{~m}\). (thermometer in shelter); after April I, I9I8, \(h_{t}=27.5 \mathrm{~m}\).

\section*{BRESLAU}

Pressure.
Hours: Means of pressure, i88i-i886 one third of mean observed values at \(6^{\mathrm{h}}\), I \(4^{\mathrm{h}}\) and \(22^{\mathrm{h}}\); I887-1920 one third of mean observed values at \(7^{\mathrm{h}}, 14^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\).
Temperature.
Hours: Means of temperature, i851-1886 one third of mean observed values at \(6^{\text {h }}, 14^{\mathrm{h}}\) and \(22^{\mathrm{h}}\); 1887-1920 one fourth of observed values at \(7^{\mathrm{h}}\), \(14^{\mathrm{h}}\) and twice the values at \(2 \mathrm{I}^{\mathrm{h}}\).
Exposure of thermometers: The exposure of the thermometers at the astronomical observatory remained unchanged from 1851 to 1920.
Errors: From I 870 to 1887 the temperature appears to be somewhat too low.

\section*{FRANKFURT A. MAIN}

Pressure.
Hours: The means of pressure from i88i to 1892 are from observations at \(6^{\mathrm{h}}\), \(14^{\mathrm{h}}\) and \(10^{\mathrm{h}}\) divided by 3: from 1893 to 1920 from observations at \(7^{\mathrm{h}}, 14^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\) divided by 3 .
Temperature.
Hours: From January 1, i835 to March 3I, I853 the temperature means were \(\frac{1}{4}\left(9^{\mathrm{h}}+\mathrm{I} 5^{\mathrm{h}}+22^{\mathrm{h}}+\right.\) minimum \()\). From April I, 1853 to December \(3^{1}\), 1892 they were \(\frac{1}{3}\left(6^{h}+14^{\text {h }}+22^{\text {h }}\right)\) and from 1893 to 1920 they were \(\frac{1}{4}\left(7^{h}+14^{h}+21^{h}+21^{h}\right)\).
Height of thermometer: The height of the thermometer above ground from 1835 to December 3 I , 1887 was 2 m . From January I, i888 to Jantary 3I, 1899 it was 3 m ., and from February i, i899 to December 1920 it was 2 m .
Exposure of thermometers: After January 1, 888 the thermometer was in a screen. After February i, i899 it was in a shelter of the English type.
Site: On December i, 1907 the station which had been in the same location since 1835 was removed to a new location in the city.
Errors: The temperature appears to be about \(0.3^{\circ} \mathrm{C}\). too high from 1857 to 1861 and from 1899 to 1907.

Temperature.
Hours: Means of temperature are: 1835 to 1886 one third of mean observed values at \(6^{\mathrm{h}}, 14^{\mathrm{h}}\) and \(22^{\mathrm{h}}\); i 887 to 1920 one fonrth of the mean observed values at \(7^{\mathrm{h}}, 14^{\mathrm{h}}\) and twice \(21^{\mathrm{h}}\).
Site: The station was moverl in 185.3. since then it has been in the same place.

\section*{KÖNIGSPERG}

Pressure.
Hours: The means are \(:\left(r^{11}+14^{h}+2 I^{11}\right)\).
Temperature.
Hours: From 1851 to June 30,1857 the means are \(\frac{1}{3}\left(6^{h}+14^{h}+\right.\) \(\left.22^{11}\right)\). From July 1,1857 to it 2 o they are \(\frac{1}{4}\left(7^{11}+14^{11}+21^{12}+\right.\) \(21^{1 \mathrm{~h}}\) ).
Heights: The height of the station, H, was 20 m . ; after Jume I , 1887 it was 15 m . ; and after October 1,1889 it was 3 m . The height of the thermometers alove ground were 1851 to June 30, \(1887, \mathrm{~h}_{\mathrm{t}}=2.8 \mathrm{~m} . ;\) July 1,1887 to September 30 , \(1889 . \mathrm{h}_{\mathrm{t}}=1.4 \mathrm{~m}\). : October \(\mathrm{r}, \mathrm{I} 889\) to \(1900, \mathrm{~h}_{\mathrm{t}}=\mathrm{t} .5 \mathrm{~m} . ; 1900\) to \(1920, h_{\mathrm{t}}=2.0 \mathrm{~m}\).
Sile: On July I, is87 the station was removed from the astronomical olservatory to the nearby Botanical Garden and the thermometers exposed in a wild shelter. In October i 889 the station was removed to another site in another part of the lower part of the city and exposed in a shelter of the English type.
Error: From 1851 to 1855 the mean temperatures are about \(0.5^{\circ} \mathrm{C}\). too high.

\section*{GREECE}

ATHENS

\section*{Authority.}

National Olservatory of Athens.
Pressure.
The mean pressures are obtained from direct readings of a large Fortin barometer No. 438 (I. Boulan) and from hourly readings of a Richard siphon barograph. The values are only reduced to zero centigrade.
Temperature.
The means are for 24 hours derived from direct observations at \(6^{1 \mathrm{~h}}, 12^{1 \mathrm{~h}}\), and \(10^{\mathrm{h}^{1}}\) (Greenwich Mean Time) combined with
hourly readings of a Richard Thermograph. No corrections are made except those needed to reduce the thermograph readings to the observed values.

\section*{Precipitation.}

The monthly and ammal totals of precipitation are from a Tonnelot rain gage and a recording Richard pluviometer.

\section*{RUMANIA}

\section*{13UCURESTI (BUCIAAREST)}

P'ressure.
For the period 188 i to June \(188 \neq\) the hours of observation were \(7^{-h}, 14^{h}\), and \(21^{\text {h }}\) and for the period of July \(188_{4}\) to 1925 they were \(S^{\mathrm{h}}, 14^{\mathrm{h}}\), and \(20^{\mathrm{h}}\)
From IS8I-I 888 the observations were in Herestrat at the agricultural college; from 1889-1925 they were in Filaret at the Central Meteorological Institute.
The values are not corrected to Lat. \(45^{\circ}\) because the latitude of Bucharest is \(44^{\circ} 25^{\prime}\) and the correction would be less than 0.05 mm .

Temperature.
The observations are not homogeneous because the site of the station has been subjected to considerable changes.
(a) 1857-1862, inclusive, the observations were made ly Dr. Barasch at the hours of \(6^{\mathrm{h}}, 16^{\mathrm{h}}\), and \(22^{\mathrm{h}}\).
(1) 1863-1870, inclusive, the station was located at Military Hospital in the strcet Stirbei-Voda, in the center of the city. During this interval the observations were made by Dr. Lessmann, specialist in mineralogy, and by Dr. Davila, doctor of medicine. The hours of observation were \(6^{\mathrm{h}}\), \(14^{\mathrm{h}}\) and \(22^{\mathrm{h}}\).
(c) 1871-1888, inclusive, the station was located at the college of agriculture at Herestran in the northern part of the city. The hours of observation were, for the period \(1871-1880\), \(6^{\mathrm{h}}\), \(14^{\mathrm{h}}\) and \(21^{\mathrm{h}}\); for the period 1881 to June \(188+, 7^{\mathrm{h}}\), \(14^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\), and for the period July 1884 to \(1888,8^{\mathrm{h}}, 14^{\mathrm{h}}\), and \(20^{h}\).
(d) 1889-1925, the station was located in the Central Meteorological Institute at Filaret in the central part of the city. The observations were made at \(8^{h}\), \(14^{h}\) and \(20^{h}\), local time. Up to I88i the means of temperature were the means of the three daily observations divided by three.

In order to make the series homugenenus these means have been corrected to the means of 24 hourly observations by applying the following corrections:
\begin{tabular}{|c|c|c|c|c|c|c|c|}
\hline & 185 & 1sti3 & 1871 & & 1857 & 15153 & 1871 \\
\hline & 1562 & 1870 & 1880 & & 1862 & \(1 \times 71\) & 1880 \\
\hline Jan. & 0.0 & 0.2 & - 0.3 & . l uly & 0.6 & 0.5 & 0.2 \\
\hline Feb. & 0.0 & --0.1 & -0.2 & Aug. & 0.9 & 0.9 & 1.6 \\
\hline Mar. & 0.0 & 0.1 & \(-0.1\) & Sept. & 0.f & 0.5 & 0.3 \\
\hline Apr. & 0.4 & 0.4 & 0.1 & Oct. & 0.3 & 11.1 & 0.9 \\
\hline May & 0.6 & 0.5 & 0.3 & Nov. & 0.2 & 0.1 & \(-0.2\) \\
\hline June & 0.4 & 0.4 & 0.1 & Dec. & 0.1 & -0.2 & 0.6 \\
\hline
\end{tabular}
\(\triangle\) fter i 88 I the daily mean of temperature was calculated according to the formula of Köppen:
\[
m=n-k(n-m i n .)
\]
in which \(m\) represents the true mean temperature: min. \(=\) daily minimum of temperature and \(k\) a cocfficient of which the value is as follows:

Precipit.ition.
The quantity of rain has lieen measured twice daily, morning and evening at the following sites:
(a) 1864-1870 at the Military Hospital, Stirbei-Voda.
(b) 1871-1888 at the college of agriculture, Herestrau.
(c) 1889-1925 at the Central Meteorological Institute, Filaret.

\section*{RUSSIA}

Aithiority.
Director of the ( entral (ieophysical () Dservatory, Leningrad.

\section*{Material。}

For the time up to 188 i homogeneous olservations within the confines of Russia are scarce, and the assurance of similarity of conditions is almost inpossible. The data for this reason begin with the year I88i.
The material from IS8I to 1915 is checked ly the method of differences, namely, the construction of mean yearly isobars, analysis of the yearly period, the computation of departures from the means of many years. This work is based on the exhaustive monograph of \(A\). Kaminski on the air pressure, on that of Eugenie Rubinstein on air temperature and of E. Berg and A. Tolski on precipitation.

I'ressure.
All the observations of pressure were made with mercurial barometers which were checked with the standard barometer at the Central Observatory from time to time by inspectors.
The pressure was reduced to \(0^{\circ} \mathrm{C}\). and to gravity at \(45^{\circ}\) Lat.
The mean pressures were the means of daily observations at \(7^{\mathrm{h}}\), \(13^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\) divided by three.
Temperature.
The means of temperature were the means of observations of \(7^{\mathrm{h}}, 13^{\mathrm{h}}\) and \(21^{\mathrm{h}}\) by the formula \(\frac{1}{3}\left(7^{\mathrm{h}}+13^{\mathrm{h}}+21^{\mathrm{h}}\right)\). These means were reduced to the means of 24 hours by means of corrections obtained from the treatise of Wild on "The Temperature Conditions of the Russian Empire."
The mean temperatures at each station were reduced to a standard level for that station by assuming a decrease of \(-0.45^{\circ} \mathrm{C}\) for each 100 m .
The data for 1916 to 1920 are not yet completed.

\section*{SWEDEN}

\author{
HAPARANDA
}

Hours of Observation.
At Haparanda the observation hours were \(8^{h}\), \(14^{h}\) and \(2 I^{h}\). The temperature means were computed by Ekhohn's formula (Nils Ekholm: Calcul de la température moyenne mensuelle d l'air aux stations météorologiques Suédoises, Appendix to the Observations Météorologiques Suédoises, vol. 56, 1914).
Pressure.
The pressure means are the direct mean values of the three observations daily at \(8^{\mathrm{h}}, 14^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\). Since November 1864 the height of the barometer above sea level has been 9.2 m ., and the whole of the pressure data is reduced to that height. The earlier height was 16.2 mm . For the years \(1860-1895\) the values of the pressure are taken from the treatise of H. E. Hamberg on "Ia pression atmospherique moyenne en Suède" (Kungl. Svenska Vetenskapsakademiens handlingar Bd. 31, No. I). Hamberg's figures were sea-level values and have been reduced back to 9.2 m . level. We have also made a correction for gravity which according to the determination of P. G. Roséns is some 0.05 mmn . greater than that used by Hamberg. In other respects the data of H. E. Hamberg is good and correct ; although we must consider that of the
earlier years preceding July \(187+\) as less reliable owing to less frequent checking of instruments and observations.
For the years i896-1920 the means are taken from our own pulblication " Meteorologiska iakttagelser i sverige." These pressure means have been corrected for gravity and such instrumental corrections applied as inspection since their first publication have shown to be neederl.
Temperature.
The heights of the thermoneters above the ground at Haparanda have varied somewhat but mostly have remained between 2 and 4 m .

> UPSALA

Hours of Observation.
The pressure and temperature means at L'psala since June 1865 have been based on 24 hourly observations.
P'ressure.
The height of the barometer above sea level has been 24.0 m . since October i 865 . Previously it was at a height of 20.8 m . but the means have all been reduced to 24.0 mm . During the years 1855 -I 862 the observation hours were \(7^{h}, 14^{\mathrm{h}}\) and \(21^{\mathrm{h}}\). After 1863 they were at \(8^{\mathrm{h}}\), \(14^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\) and the means in both cases were the means of the three observations.
Temperature.
The temperature means for the years \(1855-1862\) were computer by the formula \(\frac{1}{4}\left(7^{h}+14^{h}+21^{h}+21^{h}\right)\). From January 1863 to May 1865 the onservation hours were \(S^{\mathrm{h}}\), \(14^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\) and the temperature means were calculated by Ekholms formula.
The height of the themometers above the ground has during the entire time remained at about 1.3 m . Since October 1865 the position has not changed.
In the Upsala-Bulletins of 1888 it was noted that the barometer figures of October 1879 to December 1888 were 0.4 mm . too low. This correction has been made. Pesides the gravity correction, no other corrections have been made to the values given in the Lpsala Bulletins.
```

SWIT%ERLANO
SÄNTIS

```

\section*{Authority.}

Swiss Meteorological Service.
Site:
The meteorological olservatory is located on the highest point of the Säntis mountain, 2500.1 m . above sea level. From

September 1882 to September 1887 the observations were made at the hotel (Gasthans) some 40 m . below the summit, height 2465 m . From October 1887 to 1920 they were made at the observatory on the top of the mountain.
Pressure.
All the observations are reduced to the height of 2500 . 1 m . The correction for gravity ( 0.16 mm .) is not applied. From 1883 to 1887 the pressures are about 2 mm . too low.
The means throughout refer to \(7^{\mathrm{h}} 30^{\mathrm{m}}, 13^{\mathrm{h}} 30^{\mathrm{m}}\) and \(21^{\mathrm{h}} 30^{\mathrm{m}}\) Central European time. The instrumental crrors were determined for the entire period. The heights were measured from the well determined fixed point, Pierre dl1 Niton, at Genf. (Geneva), 373.6 m . above sea-level.
Temperature.
The exposures of the thermometers from October I888 to IS93 were not entirely satisfactory.

\section*{ZÜRICII}

Authority.
Swiss Meteorological Service.
Site.
The meteorological station during its entire existence has been in a valley toward the northwest side of Zïrichberg at no great height above the level of the lake and the Limmat plain. From i864 to 1890 the station was at the astronomical observatory of Zürichberg, the height of the thermometers 470 m . From 1891 to 1920 the station was in the Physics Puilding (near the observatory), the height of the thermometers 477 m .
Pressure.
The means have all been reduced to a height of 493.2 m . The pressure is not reduced to Lat. \(45^{\circ}\). The correction is 0.08 mm. On January i, i 890 a new series of observations were begun at the Physics building. The old series (i864-r889) leaves something to be desired in homogeneity.
Temperature.
From i86t-i 873 the themometers were exposed in a zinc screen on the north side of the tower about \(\mathrm{I} \frac{1}{2} \mathrm{~m}\). above the sod. From i874-I890 they were in a zinc screen inside of a wooden shelter. From 189i-1895 (Scptember) they were in a wooden screen on the path in front of the Plysics building. Since October 1895 they have been in an iron shelter at the same place.

\section*{NORTH AMERICA}

\section*{ALASKA}

The meteorological observations in Alaska are under the direction of the United States Weather Bureau, and are prepared in accordance with the rules and regulations of that service, except that the hours of observation are not synchronous.

The hours of observation are: Dutch Harbor, \(\mathrm{I}^{\mathrm{h}}\) and \(\mathrm{I} 3^{\mathrm{h}}\), local time; Eagle, \(8^{\mathrm{h}}\) and \(18^{\mathrm{h}}\), 135 th meridian time; Juneau, \(8^{\mathrm{h}}\) and \(20^{\mathrm{h}}\), 135 th meridian time; Kodiak, \(2^{\mathrm{h}}\) and \(14^{\mathrm{h}}\), 150 th meridian time; Nome, \(6^{\mathrm{h}}\) and \(18^{\mathrm{h}}\), 165 th meridian time; Sitka, \(8^{\mathrm{h}}\) and \(20^{\mathrm{h}}\), \(135^{\text {th }}\) meridian time ; Tanana and Valdez, \(7^{\mathrm{h}}\) and \(19^{\mathrm{h}}\), 150 th meridian time.

The instruments throughout the series of observations have been near the surface of the ground.

The heights of the thermometers above ground are: Dutch Harbor, 4 ft. ; Eagle, 4 ft. ; Juneau, 1 I ft. ; Kodiak, 6 ft.; Nome, 5 ft.; Sitka, 3 ft . ; Tanana, 4 ft . ; Valdez, 4 ft .

The heights of rain gages are: Dutch Harbor, 3 ft. ; Eagle, 3 ft.; Juneau, 4 ft. ; Kodiak, 3 ft. ; Nome, 6 ft. ; Sitka, 2 ft.; Tanana, 3 ft. ; Valdez, 6 ft .

\section*{CANADA}

Authority.
Canadian Meteorological Service.
Hours of Observation.
Present hours of observation are given under the names of the individual stations. In general these approximate to \(8^{\mathrm{h}}\) and \(20^{\text {h }}, 75\) th meridian time, except at northwestern stations.
Methods of Observation.
No details given.

\section*{Pressure.}

The monthly and annual mean pressures given in the tables are derived from twice daily observations of the barometer corrected for temperature and reduced to gravity at \(45^{\circ}\) Lat., but not reduced to sea level. The elevation of the barometers above sea level are given in the tables as " \(\mathrm{H}_{\mathrm{b}}\)."

\section*{Temperature.}

The monthly and annual mean temperatures are derived from the mean of the daily maxima plus the mean of the daily minima divided by 2 .
The heights of the thermometers above the ground \(\left(h_{t}\right)\) are 4 ft . Precipitation.

The total amount of precipitation for each month and the year is given. The amount of rain is measured in a standard gage (size not given) and to this is added the depth of snow divided by io as the equivalent of melted snow.
Observations After igzo.
At most of the stations the data after Igzo were copied from the published reports of the Canadian and United States weather services, and are not so carefully checked as preceding data.

\section*{NOTES AT STATIONS}

\section*{BARKERVILLE, BRITISH COLUMBIA}

Hours of observation, \(5^{\text {h }}\) and \(17^{\mathrm{h}}\). I.35th meridian time. "No changes in elevation. Gravity correction +.orf."

\section*{CALGARY, ALBERTA}

Hours of observation, \(5^{\mathrm{h}} 35^{\mathrm{m}}\) and \(\mathrm{I} 7^{\mathrm{h}} 35^{\mathrm{m}}\), Io5th meridian time. October I8, 1922 station moved to a height of 3428 ft . A removal correction of +.039 applied to pressure readings. Gravity correction +.009 , (index and capillarity, .OI9), total +.028.

\section*{CHARLOTTETOWN, PRINCE EDIVARD ISLAND}

Hours of observation, \(9^{\mathrm{h}}\) and \(21^{\mathrm{h}}\), 6oth meridian time. A removal correction of +0.026 applied to pressure readings.

\section*{DAWSON, YUKON}

Hours of observation, \(8^{h}\) and \(20^{\mathrm{h}}\). I \(355^{\text {th }}\) meridian time.
" Numerous changes have taken place at this station, but all readings at \(32^{\circ} \mathrm{F}\). have been reduced to standard gravity and to the station elevation of 1052 ft . Gravity correction + .045."

\section*{EDMONTON, ALBERTA}

Hours of observation, \(8^{\text {h }}\) and \(20^{\text {h }}\), \(135^{\text {th }}\) meridian time. July 20 , Igo9, station moved but no change in elevation of barometer. Dec. io, 1913, removal to altitude of 2150 ft . A removal correction of.- oio applied. March 1917, barometer moved back to 2158 ft . Gravity correction.+ oi 8 has been applied.

\section*{FATHER POINT, QUEBEC}

Hours of observation, \(8^{\text {h }}\) and \(8^{\text {h }}\), \(75^{\text {th }}\) meridian time.
" No removals at Father Point. Gravity correction + .o oाo."

\section*{KAmLOOPS, BRITISH COLUMBIA}

Hours of observation, \(4^{\mathrm{h}} 30^{\mathrm{m}}\) and \(16^{\mathrm{h}} 30^{\mathrm{m}}\), 120 th meridian time. Gravity and removal correction +.08 applied to pressure readings.

\section*{MONTREAL, QUEBEC}

Hours of observation, \(7^{\mathrm{h}} 40^{\mathrm{m}}\) and \(19^{\mathrm{h}} 50^{\mathrm{m}}\), 75 th meridian time. "No removals at this station. Gravity correction negligible."

\section*{MOOSE FACTORY, ONTARIO}

Hours of observation, \(9^{\mathrm{h}}\) and \(19^{\text {h }}\), 8oth meridian time.
" No changes have taken place at this station."

\section*{PRINCE ALBERT, SASKATCHEWAN}

Hours of observation, \(6^{\text {h }}\) and \(18^{\text {h }}\), 105 th meridian time.
"A removal correction of +.020 has been applied. Gravity correction +.oIg."

\section*{QU'APPELLE, SASKATCHEWAN}

Hours of observation, \(6^{\text {h }}\) and \(18^{\text {h }}\), Io 5th meridian time. Pressure readings corrected for temperature but not for gravity.

\section*{SABLE ISLAND}

Hours of observation, \(8^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\), 6oth meridian time.
"No removals at this station."

\section*{ST. JOHNS, NEWFOUNDLAND}

Hours of olservation, \(9^{\mathrm{h}}\) and \(21^{\mathrm{h}}\), Goth meridian time. Gravity correction +.007 . In October Iの17 it was discovered that an incorrect
elevation was being used and a new reduction table for 160 ft . was brought into use.

\section*{SOLTHWEST POINT, ANTICOSTI}

Hours of observation, \(8^{h} 30^{m}\) and \(20^{\mathrm{h}} 30^{\mathrm{m}}\), 6oth meridian time. Gravity and index correction +O . 2 applied to pressure readings.

\section*{TORONTO, ONTARIO}

Hours of observation, \(8^{\mathrm{h}}\) and \(20^{\mathrm{h}}\), 75 th meridian time. October 1909 moved to an elevation of 379 ft . All rearlings have been reduced to an elevation of 350 ft .

\section*{VICTORIA, BRITISH COLUMBIA}

Hours of observation, \(5^{1_{1}}\) and \(17^{\mathrm{h}}\), 120 th meridian time.
Elevation of station changed from 85 ft . to 228 ft . The pressure readings have all been reduced to the height of 85 ft .

\section*{WINNIPEG, MANITOBA}

Hours of observation, \(7^{\text {h }}\) and \(\mathrm{I}^{\text {12 }}\), goth meridian time.
"No removals at this station. Gravity correction + .oro."

Authority for Data.
United States Weather Bureau, Climatological Division.
Hours of Observation.
From Nov. I, 1870 to August 24, 1872, Observations were made at \(7^{\mathrm{h}} 35^{\mathrm{m}}\), \(16^{\mathrm{h}} 35^{\mathrm{m}}\) and \(23^{\mathrm{h}} 35^{\mathrm{m}}\), Washington time.
From Aug. 25, 1872 to Oct. 31, 1879, Observations were made at \(7^{\mathrm{h}} 35^{\mathrm{m}}\), \(16^{\mathrm{h}} 35^{\mathrm{ml}}\) and \(23^{\mathrm{h}}\). Washington time.
From Nov. I, 1879 to Dec. 3I, 1884, Observations were made at \(7^{\mathrm{h}}, 15^{\mathrm{h}}\) and \(23^{\mathrm{h}}\), Washington time.
From Jan. 1, 1885 to Dec. 31, 1886, Observations were made at \(7^{\mathrm{h}}, 15^{\mathrm{h}}\) and \(23^{\mathrm{h}}, 75\) th \(^{\text {M }}\) Meridian time.
Firom Jan. I, i887 to June 30 , 1888 , Observations were made at \(7^{\mathrm{h}}, 15^{\mathrm{h}}\) and \(22^{\mathrm{h}}\), 75th Meridian time.
July i, i888 to the present time, Observations were made at \(8^{\text {h }}\) and \(20^{\mathrm{h}}\), 75 th Meridian time.

Notes on the Methods of Observation.
(Taken from the Ammal Report of the Chief of the Weather Bureau, 1921-1922.)
Pressurc: Two mercurial barometers of the well-known Fortin cistern pattern, or a modified form thereof, are furmished each station. One of these, the " station barometer," is used in making all regular observations; the other, the "extra." is held in reserve for use in case of emergency. except that once each month five comparative readings are made on the two instruments for purpose of check upon the deterioration of either instrument.
Each barometer, before issue to station, is compared with the substandard at Washington, and a certificate or correction card furnished showing the several constant corrections that must be applied to the readings of the instrument in order to derive therefrom the actual pressure of the air in standard units at a specified elevation. Each observation as made, therefore, is corrected by the application of the following:
(I) Correction for scale errors, capillarity, etc.
(2) Correction to standard gravity, comprising both latitude and altitude terms.
(3) Correction for removal-a correction applied if any change has been made in the elevation of the barometer. to reduce the readings to the elevation adopted in 1900 .
Corrections I, 2, and 3 are constant for any one station and are combined in a single sum.
(4) Correction for the temperature of the scale and mercurial column.
The monthly mean pressures given in the summary are deduced from the corrected observations of pressure at \(8^{h}\) and \(20^{\text {h }}\). 75th meridian time. ly taking the mean thereof and applying therets a correction to reduce to the mean of 24 -hourly observations. At several Alaska stations the mean is printed uncorrected.
Temperature: The maximm temperature is oltained by the use of the Negretti and Zambra mercurial thermometer. having a constriction in the bore of the tube below the scale. The minimum temperature is obtained by the use of the ordinary Rutherford alcohol minimum thermoneter. Both instruments are read and the values recorded
twice daily, at \(8^{\mathrm{h}}\) and \(20^{\mathrm{h}}\), 75 th meridian time, and are set twice daily at \(8^{\mathrm{h}}\) and \(20^{\mathrm{h}}\). The extremes given in the summaries are for the civil day, midnight to midnight, normal * standard time. The monthly means have been obtained by dividing the sum of the mean maximum and mean minimum temperature by 2.
Prccipitation: The rain gages used at the regular Weather Bureau stations have a circular catchment area of about \(S\) inches diameter, and the snow, hail, or sleet caught within them is melted and measured as water. The rain gage proper is set within an inclosing cylinder 8 in . in diameter and 2 ft . high, which serves as an overflow attachment in the case of heavy rains and as a snow gage in the winter season.
The sum total of the depth of rain and melted snow is measured to within 0.01 in. at \(8^{\text {h }}\) and \(20^{\mathrm{h}}\). 75 th meridian time, daily. The total precipitation is detemmed from the amounts recorded daily, midnight to midnight, standard of time in local use.
The snow caught and retaincd in the gage is melted and measured as water. No correction is applied for the snow that is lost out of the gage by the eddying action of the wind : consequently in some cases the record is less than would be given if the observer had measured cylinders of snow cut from the spots representing the average snow fall on the ground. When it is known that the catch of the snow gage is markedly deficient, an independent ground measurement is made and used as the official record. The loss of both rain and snow. cansed by high winds, from gages located on the roofs of tall huildings in which some of the regular stations of the Weather Burean are located is undonbtedy larger than is the case at the cooperative stations, where the gages are located in the open country and near the ground, but this loss does not appear to be sufficient to make the monthiy and annual sums derived from these two classes of stations wholly inconsistent with each other.
For a detailed account of the method of reducing the observed barometric pressures the reader is referred to the " Report on the barometry of the I nited States, Canada,

\footnotetext{
* Standard time of the zone in which the station is located.
}
and the W'est Indies," to le found in the Annual Report of the Chief of the Weather Bureau. Igoo-Igor, volume II.
Thermometers are exposed in standard Weather Burean shelters.

\section*{ABILENE. TEXAS}

Weather Bureau observations began Sept. If. I885. Remorals occurred Aug. I, i\&86. Jan. I, I894, and Jan. \&. Igio. The readings of the barometer are all reduced to its level in 1900, 1/37. 6 ft . above sea level.

Heights of thermometers above ground were: ISS5-ISS6, 42 ft : IS86-1893, \(64 \mathrm{ft}:\). I894-1909, \(47 \mathrm{ft}:\) : \(1910-1923.10 \mathrm{ft}\). ; and of the rain gage, 1885 -I886, 30 ft : \(1885-1893.53 \mathrm{ft} .: 1894-1909,36 \mathrm{ft}\); IgIo-1923. 3 ft .

1915 to 1923 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 65111.
All values have been corrected to Mean Sea Level by applying the following corrections:
1902 to 1914 . .............................. . . . \(+2.60 \mathrm{mm11}\).
1915 to 1923 . . . . . . . . . . . . . . . . . . . . . . . . +5.86 m 1111.
Instriment: The pressure values are obtaned from a barograph controlled by readings of a standard barometer read 5 times a day.
Homrs: The values are the means of hourly readings from the barograms.
Notes: All values have been corrected to mornal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -0.45 mmn .
'Temper.tutue.
Site: The height of the themmoneter sereen aloove Mean Sea Level was:
1902 to 1914.............................................. 31 III.
1915 to 1923 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 64111.
Hours: From 1902 to 1907 the temperature values are from onservations of a standard themmoneter at \(9^{\text {h }}\), \(12^{\mathrm{h}}, 15^{\mathrm{h}}, 21^{\mathrm{h}}\), corrected to the mean of 24 bourly readings by the following corrections, based on hourly values igo8 to 1924:

From igo8 to 1924 the values are the means of the 24 hourly readings from a thermograph, compared with a standard thermoneter 5 times a day.

\section*{Precititation.}

Site: The height of the rain gage above Mean Sea Level was:

1915 to 1923 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 64 m.
Instrument: A recording rain gage of Fascianelli, with a receiver 0.2 m . in diameter, was in use throughout.

\section*{PONTA DELGADA}

Autilority.
Serviço Meteorológico dos Açores, Ponta Delgada, San Miguel, Açores.
Pressure.
Sitc: The height of the barometer cistern above Mean Sea Level was:
IS94 to I914 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 17 m.
1915 to 1923 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 22.2 m.
All values have been corrected to Mean Sea Level by applying the following corrections:
I894 to 1914 . . . . . . . . . . . . . . . . . . . . . . . . . . . . + I. 40 mm .
i915 to 1923 . . . . . . . . . . . . . . . . . . . . . . . . . . . + I. 90 mm .
Instrument: The pressure values are obtained from a barograph controlled by readings of a standard barometer, read 5 times a day.
Hours: The values are means of hourly readings from the barograms.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of \(-0.45 \mathrm{mm1}\).
Temperature.
Site: The height of the thermometer screen was 36 m . above Mean Sea Level throughout the period.
Hours: From i894 to 1907 the temperature values are from observations of a standard thermometer at \(9^{\mathrm{h}}, \mathrm{I} 2^{\mathrm{h}}\), \(5^{1}, 21^{\mathrm{h}}\), corrected to the mean of 24 hourly readings by the following corrections, based on hourly values 1908 to 1924:

From igo8 to 1924 the values are the means of the 24 hourly readings from a thermograph, compared with a standard thermometer 5 times a day.
Precipitation.
Sitc: The height of the rain gage above Mean Sea Level was 37.5 m . throughout the period.

Instrument:
From 1894 till 1806 . October 11 , a Babinet rain gage with a receiver 0.113 m . in diameter, was in use. From 1896 , October iz to 1923 , a recording rain gage of Fascianclli with a receiver 0.2 m. in diameter was in use.
Notes: The exposure of the rain gage at the Observatory is not good, and for comparison observations are taken at Faja de Cima, a station with a good exposure near Pouta Delgada at a height of \(1 / 55 \mathrm{~m}\). To make the values taken at the Olservatory comparable with those at Faja de Cima, the olservations should be increased by 59 per cent.

\section*{BERMUDA}

1887 to 1888 . London, Army Medical 1)epartment. Annual abstract of meteorological olservations taken at Netley and stations abroad. London, Army Medical Dept. Reports.
1889 to 1893 . Manuscript data supplied by the Meteorological Office, Toronto and filed in the Meteorological Office. London.
1894 to 1900. Manuscript returns filed in the Meteorological Office, London.
1001 to 1910. Manuscript data supplied by the Meteorological Office, Toronto and filed in the Meteorological Office. London.
19II to 1920. Permuda, Meteorological observations taken at Prospect. Monthly sheets.
I'ressure.
Changes of Site:
1860, Jantary (0) 1809 November. .it. George's \(\mathrm{H}_{\mathrm{b}}=61 \mathrm{ft}\). 1870, April to 1873 August, Hamilton. \(H_{b}=120 \mathrm{ft}\).

For corrections applied to reduce to 15 I ft . see Table A.
1873. September to 1920 December. Hamilton \(H_{b}=151 \mathrm{ft}\).

There is a break from December 1869 to March i 870 " owing to the moving of the P . M. O. Office from St.

George's to Hamilton and the great difficulty there of obtaining a good site for the crection of the Observatory." (Ms. Return, March I87o.)
In igor the name of the station is changed to Prospect, but apparently without any change of site, the height remaining as \(\mathrm{I}_{5} \mathrm{I} \mathrm{ft}\).
Changes of Instrument:
1866, January to 1872, December. Par. No. 34. Negretti and Zambra. Index correction +.03 I in. applied.
187.3. January, probably to 1920 December. Bar. No. io, Negretti and Zambra. Index correction 1873 to 1893 + .oıo in., i894 probably to igio +.oi2 in. (no information is available as to the reasons for these changes of index correction). IgII-I920, index correction given as +.010 in .
Hours of Observation: The combination \(\frac{1}{2}\left(9^{\mathrm{h}}+15^{\text {h }}\right)\) has been adopted as a standard.
From 1866 to 1888 observations were taken at \(9^{17}\) and \(15^{\text {h }}\)
From 1889 to 1910 observations were taken at \(9^{h 1}\) and \(21^{\mathrm{h}}\). The mean \(\frac{1}{2}\left(9^{\mathrm{h}}+2 \mathrm{I}^{\mathrm{h}}\right)\) has been reduced to \(\frac{1}{2}\left(9^{\mathrm{h}}+\right.\) \(15^{\text {l }}\) ) by means of the corrections given in table \(B\). which were obtained from observations and is \({ }^{\text {h }}\) and \(20^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{m}}\) during the years 1913 to 1918 .
From 191I to 1920 observations were taken \(8^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{m}}, 15^{\mathrm{h}}\) and \(20^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{m}}\). The observation hour of \(8^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{m}}\) was accepted as equivalent to \(9^{\text {h }}\) and the mean \(\frac{1}{2}\left(8^{\mathrm{h}}\right.\) \(41^{\mathrm{m}}+15^{\mathrm{h}}\) ) was adopted for this period.
The observation hour of \(20^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{mm}}\) was accepted as equivalent to \(2 \mathrm{I}^{\mathrm{h}}\) in calculating the corrections given in table B.
From April to October 1919 inclusive observations were taken at \(7 \frac{1}{2} \mathrm{~h}\) and \(14^{\mathrm{h}}\). This combination has been accepted as equivalent to \(\frac{1}{2}\left(9+15^{h}\right)\) and no correction has been applied.
Notes: From January I9I to March 1914 the printed reports accepted as equivalent to \(\frac{1}{2}\left(9^{h}+15^{\text {h }}\right)\) and no correction +.010 in." and from February 1912 to December 1920 the pressure columns are headed "Corrected for index crror and gravity and reduced to \(32^{\circ} \mathrm{F}\)." In March igi 4 it was pointed out that the appropriate gravity correction for Ber-
mucla was - .03.3 in., and in reply the Senior Medical Officer stated (27th April, 1914) that the figure +.010 in . was the correction for index error and that the gravity correction harl in fact not been applied. From this statement, which is supported by a comparison of the whole series of annual means with those at the nearest stations on the coast of America, it was inferred that the observations had leen corrected for index error, but not for gravity, and the latter correction ( -.033 in. ) has been applied throughout.

Table A.-Corrections Applied for Differences of Height. Inches
Jan. Feb. Jar. Apr. May June July Aug. Sept. Oct. Nov. Dec. 61 ft.
\(0151 \mathrm{ft} .-.090-.096-.096-.096-.095-.094-.094-.094\)-. 094 -. 095 -. \(095-.096\)
120 ft .
(0) \(151 \mathrm{ft} .-.033-.033-.033-.033-.033-.032-.032-.032-.032-.033-.033-.033\)

Table B.-Corrections Applicd to Reduce \(\frac{1}{2}\left(y^{h}+2 t^{h}\right)\) to \(\frac{1}{2}\left(9^{h}+15^{h}\right)\). Inches
Jan. Feb. Mar. Apr. May June July Iug. Nept. Oct. Nov. Dec. -. \(017-.017-.016-.013-.009-.006-.004-.006-.011\)-.015 -. \(016-.016\) Based on olmervations at \(8^{4} 41^{\mathrm{m}}, 15^{\mathrm{h}}\) and \(20^{\mathrm{h}} 41^{\mathrm{m}}\), 1913-1918 inclusive
Temperature.
Authorities:
iS87 to i8go. London, Amy Medical Department, Annual abstract of meteorological observations taken at Netley and stations abroad. Londons, Army Medical Dept. Reports.
ISgI to 1893 . Mannscript data supplied by the Meteorological Office, Toronto and filed in the Meteorological Office. L ondon.
1894 to 1000 . As for l'ressure.
igor to igio. Toronto, Meteorolngical Service of Canada, Annual Report.
igit to 1920. As for Pressure.
Sitc: See note under Pressure.
Obserations: The combination \(:\left(9^{\mathrm{h}}+2 \mathrm{I}^{\mathrm{h}}+\right.\) Max. + Min. \()\) appears to give a good representation of the 24 -hour mean. From 1866 to 1890 and from 1894 to 1900 many of the observations of the daily minimum temperature appear to be unreliable and the means for 1866 -i890 and \(180+\) to 1000 are the means of the readings at \(9^{\frac{1}{1}}\) corrected to the com-
bination \(\frac{1}{4}\left(9^{\mathrm{h}}+2 \mathrm{I}^{\mathrm{h}}+\right.\) Max. + Min. \()\) by means of the corrections given in Table A, based on the olservations for the period igil to 1920.
From i891 to 1893 the values given are the means of mean daily maximum and mean daily minimum corrected to the combination \(\frac{1}{4}\left(9^{\mathrm{h}}+21^{\mathrm{h}}+\right.\) Max. + Min. \()\) by applying the corrections given in Table A.
From jgor to igio the values given are the direct means \(\frac{1}{4}\left(9^{h}+2 \mathrm{I}^{\mathrm{h}}+\right.\) Max. + Min. \()\).
From 19II to 1920 the values are \(\frac{1}{4}\left(8^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{m}}+20^{\mathrm{h}} 4 \mathrm{I}^{\mathrm{m}}+\right.\) Max. + Min.) except (luring April to October 19I9. which are \(\frac{1}{4}\left(7 \frac{1}{2}^{\mathrm{h}}+192^{\frac{1}{h}}+\right.\) Max. + Min. \()\). No correction appears to be necessary to the values for these seven months.

Table A.-Corrections to Reduce Temperature to the Combination \(\frac{1}{4}\left(9^{h}+2 I^{h}+\right.\) Max. + Min. \()\)
Jan. Fel, Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. \({ }^{\circ} \mathrm{F}\).

Rainfall.
Authoritics:
I 887 to 1890 . From a rainfall series compiled by W. H. Potter and published in the Monthly Weather Review, vol. 53, 1925, p. 24.
I891 to 1893 . As for Temperature.
1894 to 1920. As for Pressure.
In the years 1866 to 1886, a few values, not obtainable in
manuscript, were taken from the same authority as 1887 to 1890 . The values so obtained are in italic.
Site: The station was removed from St. George's to Hamilton (Prospect Hill) between November 1869 and March iS7o. The rainfall amounts for the years i 866 to 1869 are probably not comparable with those from i87o onwards.

\section*{CANARY ISLANDS (LA LAGUNA)}

Authority.
Olservatorio Central Meteorológico. Madrisl, Spain. Pressure.

After investigation it was decided that the pressure data were not sufficiently reliable for inclusion.

Temperatire.
Site: The height of the station alowe Nean Lica level was:
1885 to 1900 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 506 m.
191 i to i920 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 547 m.
Instruments and Exposure: For the early period no information can be obtained. From 191 ito 1915 August, maximum and minimum thermometers by Tonnelot were installed in a small meteorological shelter which was placed in the center of a court-yard. From 1915 September, a standard thermometer sereen of the Madrid type was in use.
Hours: The standard adopted is the mean between the mean daily maximum and mean daily minimum temperature.
Prectiotation.
Instrumont: A Hellman rain gage was in use throughont the period with the rim 1.55 m . above the ground.

\section*{FAROES}

THORSHAVN

\(18+5\) November to 1921 January.................. . . 1 . 3 m .
I921 February to 1923 . . . . . . . . . . . . . . . . . . . . . . . 25.0 m .
All values have been reduced to Mean Sea level by applying the following corrections:
I845 November to 1921 January.............. +1.0 mm .
1921 February to 1923 ........................ +2.3 mm .
Hours: The values of pressure do not refer to a fixed hour, but are the mean values of 3 to 6 observations a day. The diumal variation is negligible in comparison with the variation from month to month.
Notes: All values have been corrected to nomal gravity (I at. \(+5^{\circ}\) ) by applying a correction of +1.3 mm .
Temperiture.
Hours: The hours of olservation are as follows:
I. \(\left\{\begin{array}{l}18+5 \text { November to } 1873 \text { May: } 7^{\text {h }} . \\ 187.3 \text { June to 1923. 8h. }\end{array}\right.\)
\(\left\{18+5\right.\) November to 1808 December. \(14^{\mathrm{th}}\).

1873 Jume to 1923 . \(14^{\text {h }}\).
3. 1873 June to 1923. \(\frac{1}{2}\left(8^{h}+14^{h}\right)\).

Precipitation.
The height of the rim of the rain gage above the ground is 1.9 m .

\section*{VESTMANNO}

Autiority.
Section Météorologique de Loggildingarstofan, Reykjavik, Iceland.
Pressure.
Site: The height of the larometer above Mean Sea Level was: i88I to I92I August. . . . . . . . . . . . . . . . . . . . . . . . 7.7 mm .
1921 September to 1923........................... 132 m.
All values have been reduced to Mean Sea Level by applying the following corrections:
1881 to 1921 August.......................... +0.7 mm .
1921 September to 1923 between +12.0 mm . and \(+12 .+\) mm . varying according to the mean dry butb temperature.
This height correction is calculated according to Rühlmann's formula in Jelinck's "Anleitung zur Ausführung meteorologischer Benlachtnugen," Wien, k. k. Zen-tral-Anstalt für Meteorolngie und Georlynamik.

Hours: The values of pressure do not refer to a fixed hour, but are the mean values of 3 to 6 observations per day. The diurnal variation is negligible in comparison with the variation from month to month.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of +1.2 mm .
Temperature.
Hours: The hours of observation are as follows:
(I) \(8^{\text {h }}\).
(2) \(14^{11}\).
(3) \(\frac{1}{2}\left(8^{h}+14^{h}\right)\).

Site: As for Pressure. In order to make the observations at the two sites comparable, a correction of \(+0.7^{\circ} \mathrm{C}\). has been applied to the values for 1921. September to 1923, December.
Precipitation.
The height of the rim of the rain gage above the ground is I.I m.

\section*{MADEIRA (FUNCHAL)}

Authority.
Observatório Central Meteorológico, "Infante D. Luis," Lisbon, Portugal.
Pressure.
Site: The height of the barometer above Mean Sea Level was 25 m . throughout the period (1880 to 1920).
Instrument: A Kew pattern barometer was in use throughout the period.
Hours: The values are the means of observations taken at \(9^{\text {h }}\). \(15^{\mathrm{h}}\), and \(21^{\mathrm{h}}\).
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -0.85 mm .
Temperature.
Means:
The standard adopted is an approximation to the mean of 24 hourly readings given by the mean of the dry bull readings at \(9^{h}\) and \(21^{\mathrm{h}}\) and of the daily maxima and minima given by self-registering thermometers, i.e.
\[
\frac{1}{4}\left(9^{1 h}+21^{11}+m a x .+\min .\right)
\]

Preciritation.
Instrument: A Babinet pluviometer (of diameter 11.27 cm .) was in use thronghout the period.

\]

Pressure anis Temperature.
After a prolonged investigation it was decided that the data of pressure and temperature at this station were not sufficiently relialle to be included.
Precipitation.

\section*{Iuthoritics:}

1853 to 1865 . Meteorolngical observations at the Foreign and Colonial Stations of the Royal Engineers and the Army Medical Department, 1852-1886, London, 1890.
1866 to 1886. Manuscript returns communicated by the Medical Department and filed in the Meteorological Office, London.
1887 to 1894 . London, Army Medical Department. Annual abstract of meteorological olservations taken at Netley and stations abroad. London, Army Medical Department Reports.
1895 to 1913 . Nonthly summaries in manuseript communieated by the Botanic Station and filed in the Meteorological Office, London.
1914 to 1920. Barlados Blue Books.
Site: The height aloove Mean Sea Level was:
1853 to 1862
6 ft .
1865 to 1867 August .............................. 15 ft .
1867 September to 1868 September .............. 25 ft .
1868 Oetober to 1874 ................................. 28 ft .
1875 to 1894 ........................................... 3i ft.
1895 to 1902 June ...................................... 210 ft .

入otes: Two stations have been maintained at Barbados. One, St. Am's, from 1853 to 1900 under the control of the Medical Department and the other from 1895 to 1920 at the Botanic Station. The monthly totals for the two stations 1895 to 1900 were compared and the following smoothed ratio found:
\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|c|}
\hline Jan. & F(b) & Har. & Apr. & May & June & July & Aug. & sept. & Oct. & Nov. \\
\hline 1.43 & 1.57 & 1.48 & 1.21 & 0.92 & 0.82 & 0.94 & 1.13 & 1.21 & 1.18 & 1.1. \\
\hline
\end{tabular}

The values for St. Ann's, 1853 to 1894 , have been made comparable with the observations at the Botanic Station, i895-1920, by the application of this correction.

\section*{BELEN COLLEGE OBSERVATORY, HABANA, CUBA}

Belen College Observatory has been situated in the old city of Habana from 1857 to 1925 . From 1857 to 1897 it was on the third floor over the front of the college, facing east. In iso7 the observatory was enlarged and the instriments were installed in a tower over the fourth floor, still facing east. This tower was 95 m . from the church belfry, the only other neighboring buikding higher than the Observatory.

There has been only one change in the position of the instruments, which took place in 1897 , thus forming two series, one from 1857 to 1897, the other from 1898 to 1925.

In the first series the cistern of the barometer was 19.3 m . above sea level, the thermometer at 14.5 m . above the level of the street, and the mouth of the rain gage 19 m . above the street.

In the second series the cistern of the larometer was 24.34 m . above sea level, the thermometer 20.5 m . above the street, except for a few years when it was 25.3 m . above the street ; and the rain gage was 24.95 m . above the street.

The tables of atmospheric pressure and temperature, respectively, are the means of ten daily bi-hourly observations, from \(4^{h}\) to \(20^{h}\) inclusive. As the observations between \(24^{\text {h1 }}\) and \(2^{h_{2}}\) are lacking, the diurnal period is not complete.

In the pressure table, attention is called to the period of the first 14 years, during which the means are somewhat low in relation to all the rest of the series. During these years all ten (laily eye observations were not made; for this reason a discrepaney is shown in relation to the rest of the series.

The temperature table begins with 1871 , the ten daily eye observations having been started that year and continued withont interruption. Account should be taken of the position of the thermoneters which had a northerly window exposure from 1871 to 1897 . They were protected on the inside by a glass and shutters and on the outside by more shutters. This window was situated over a nearby roof, which tended to elevate the temperature by radiation or convection, most noticeably during spells of calm and strong solar action.

After 1897 the thermometers were put in a box with double shutters and placed on the roof of the building, where there was free circulation of air in all directions.

As the monthly and yearly means are taken from the monthly publication of the Observatory, and are means of to daily bihourly observations, the results are somewhat high, on account of the lack of olservations between \(24^{\text {h }}\) and \(3^{\text {h }}\). Nevertheless they give faithfully the trend of the temperature and the variations from year to year.

Mean Temperature.
Authorities: As for Pressure, but the values previous to 1874 , January, were rejected as being doubtful.
Sitc: See note under Pressure.
Observations: The standard adopted is the mean of the mean daily maximum and mean daily minimum. These figures were unreliable or wanting in certain months and the values in italics have been computed from the fixed morning hour of observation by means of the following correction obtained from a number of the most reliable records.
\(9^{\circ}{ }^{\circ} \mathrm{F}\) Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec.

Precipitation.
Authorities: As for Pressure. Data for \(1866-1870\) were obtained from meteorological returns commmicated by the Royal Army Medical Corps and filed in the Meteorological Office, London.
Site: See note under Pressure. The values for the two periods are probably comparable.

\section*{PORT AU PRINCE, HAITT}

Altiority:
Bulletin Semestriel, Seminaire Collège S't. Martial, 1888-1925. The records have been checked and brought down to date ly Prof. Sherer.
The observations from 1865 to 1869 were made by Prof. Ackermann and published in the Jahrbuicher der k. k. ZentralAnstalt für Meteorologie und Ceodynamik. Wien, i893 and also in Proceedings of the American I'hilosophical Society. Vol. XI, 1870, No. 84. pp. 490-519.
I'ressure.
The height of the barometer from 1888 to 1907 was 37.0 m . (owing to faulty measurements the height was given too low in the early pullications). In 1 roo the height was changed to 37.4 m . and remained at that level up to 1925. The means given are those derived from olservations at \(\eta^{\prime \prime}\). \(13^{\text {h }}\) and \(21^{\mathrm{h}}\). To correct these means to \(2+\) hour means apply the following corrections:

The pressure readings were corrected for temperature and a correction of -1.57 was applied to reduce to gravity at \(45^{\circ}\) Lat.
Temperature.
The hours of observations were the same as those for pressure and the means are \(\left(7^{h}+1.3^{h}+21^{h}+21^{h}\right)\).
Precipitation.
The precipitation records are in millimeters and oltained from the same sources as those of pressure and temperature.

RICHMOND HILL, GRENADA
Lat. \(12^{\circ} 5^{\prime} \mathrm{N}\). Long. \(61^{\circ} 46^{\prime} \mathrm{W}\).
I'ressure.
Authorities: 189r-1gzo. Girenada (invermment (iazettes.
Site: The height of the barometer above Mean Sea Level was 509 ft . throughout the period.
Instrument: Parometer \({ }^{5} 575\), Negretti and Zambra appears to have been in use throughout.

\section*{Hours:}
\[
\begin{aligned}
& 1891-1907 \cdot 9^{\mathrm{h}} . \\
& 1908-1920 \cdot 9^{\mathrm{h}} \text { and } 18^{\mathrm{h}} .
\end{aligned}
\]

The values for 189 r to 1907 are corrected to \(\frac{1}{2}\left(9^{h}+18^{h}\right)\) by the addition of the following corrections:
```

9h}\mathrm{ to }\frac{1}{2}(\mp@subsup{9}{}{h}+1\mp@subsup{8}{}{h}
inches -.031-.032-.034-.035-.030-.023-.028-.028-.026-.038-.036-.035

```

Notes: All values are reduced to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -.070 in .
The Gazette for October 1920 was not available. The "Annual Report" for 1920 contains means of pressure at \(9^{\mathrm{h}}\) reduced to Mean Sea Level, and a correction of -.565 in . has been applied in order to reduce the mean for October to 509 ft . \(\frac{1}{2}\left(9^{h}+18^{h}\right)\) and Lat. \(45^{\circ}\).
Temperature.
Authoritics: As for l'ressure.
Sitc: As for Pressure.
Obscrvations: The standard adopted is the mean of the mean daily maximum and the mean daily minimum. These figures were unreliable in certain months and the values in italics have been computed from the \(9{ }^{\text {l2 }}\) dry bull observations by means of the following corrections obtained from the records of other years which appeared to be reliable.

\section*{TRINIDAD}

Lat. \(10^{\circ} 40^{\prime} \mathrm{N}\). Long. \(91^{\circ} 31^{\prime} \mathrm{W}\).
Pressure.
Authoritics:
1862 Febrnary to 1879 December. Appendix to Report on the Rotanic Cardens, Mrinidad for 1880 .
1880 to 1882. Appendix to Report on the Botanic Ciardens, Trinidad for 1882 .
1883 to 1884. Appendix to Report on the Rotanic Gardens, Trinidad for 188,3 and 1884 .
1885. No information available.
1886. Manuscript data communicated by the Director of Agriculture, Trinidad.

1887 Jannary to May. Appendix to Report on the Botanic Gardens, Trinidad, for 1887.
1887 June to 1899 November. Manuscript returns communicated by the Superintendent, Potanic Gardens, and filed in the Meteorological Office, London.
1899 December to 1906. Reports on the Botanic Gardens. 1907 to 1908. Neteorological returns for the Royal Botanic Gardens.
1909 to I920. Trinidad Blue Books.
Sitc: The observations were taken at St. Ann's where the barometer was at a lieight of 133 ft ., from 1862 to 1900 June, and at St. Clair Experiment Station, where the barometer was at a height of 72 ft ., from Igoo July to I920.
Changes of Instrument: The instrument in use up to is8f is unknown. In I 887 , there were three barometers:

Negretti \& Zambra with index error correction. None
Adie's Marine with index error correction...... + .ool in.
Callaghan Standard with index error correction. . -.005 in .
It is not known which barometer was used, but it is presumed that the necessary corrections have been made.
In 1925, harometer Adie, London, 292, with no known index error correction was in use, but it is not known when this barometer was taken into use.
Changes of Hours of Obscration:
1862 February to 1884 . \(92^{1 \mathrm{~h}}\) and \(152^{\mathrm{h}}\).
1887 Jannary to March. \(9^{1 \mathrm{l}}\) and \(15^{\text {h }}\).
1887 April to 1920 . \(7^{\mathrm{h}}\) and \(15^{\text {h }}\).
All values have been corrected to the mean of 24 hours by corrections (Table A) based on observations at Barbados.

Notes: On page I of the 1888 Report on the Botanic Gardens, Trinidad, it is stated that the pressure values previous to January 1889 are too low by .in in. This correction of +.118 in. has been applied from 1862 February to 1888 December.
In a report on the station received in the Meteorological Office, London, in 1925, it is stated that the height
correction applied to the pressure values for a height of 72 ft . is +.102 in . This is too high by .027 in., and a correction of -.027 in . has been applied from igoo July to 1920.
All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -.072 in .
Temperature.
Authorities: As for Pressure.
Site: As for Pressure. No correction has been applied for the change of site. Inspection of the daily observations covering the change indicates that the correction required would be small.
Obscriations: All values have been corrected to the mean of 24 hours, by corrections (Table B) based on \(3 \frac{1}{2}\) years observations at Trinidad.* The corrections were applied to the readings at the following hours :
1862 February to \(188+\frac{1}{2}\left(9 \frac{1}{2}+15 \frac{1}{2}\right)^{\mathrm{h}}\).
1887 January to March. \(\frac{1}{2}(9+15)^{\mathrm{h}}\).
1887 April to 1920 . \(\frac{1}{2}(7+15)^{\mathrm{h}}\).

\section*{Prectipitation.}

Authoritics: As for Pressure, with the addition of 1885 and i 886 from the Trinidad Blue Book, 1919.
Sitc: As for Pressure. No correction has been applied for the change of site.

HONOLULU
\[
\text { Lat. } 21^{\circ} 19^{\prime} \mathrm{N} \text {. Long. } 157^{\circ} 52^{\prime} \mathrm{W} \text {. }
\]

Pressure.
Authorities:
1883 to 1890 March. Report of Assistant in Charge of Meteorology, Honolulu, 1890, p. 23.
1891 to 1903. Weather Record for Honolulu and the Hawaiian Islands igo3, p. 40.
1904 September to 1920. Manuscript data supplied by the United States Weather Bureau, Washington.
Site: In 1883 the height of the barometer alove Mean Sea Level was 34 ft . and in 1892 , 50 ft . The date of change is not known, but the observations up to 1903 are published at Mean Sea Level and it is presumed that the appropriate corrections have been applied.

1904. September to 1920 .......... 38 ft.

All values have been corrected to a height of 38 ft . by applying a correction of -.040 in , to the values from 1883 to 1903.
Hours:
1883 to 1890 March. \(10^{\text {h }}, 15^{\text {h }}, 21^{\text {h }}\).
1891 to \(1903.9^{\text {ht }}, 15^{\text {h }}\).
1gOt September to \(1920.8^{\text {h }}, 20^{\text {h }}\).
Notes: The values from 1883 to 1890 March have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -.057 in . From 1891 to 1903 the gravity correction is stated to have been applied in the published values and from 190+ to 1920 the gravity correction was applied by the U. S. Weather Burean.
The pressure data from 1892 to 1925 were reduced to a miniform series, \(\frac{1}{2}\left(8^{h}+20^{h}\right)\), by Mr. R. H. Weightman of the U.S. Weather Bureau. The same mean correction was applied to the monthly and annual values of 1891 .
An approximate correction of +.030 was applied to the observations from 1883 to 1890 to correct to the same hours, \(\frac{1}{2}\left(8^{h}+20^{h}\right)\), and to the same level, 38 ft .

Mean Temperature.
Authorities: 1883 to 1889 . Weather Record for Honolulu and the Hawaiian Islands, I903, p. 4I.
IS90 to 1920 manuscript data supplied by the United States Weather Bureau, Washington.
Site: Previous to 1904 September, temperature observations were made at the corner of Dole and Alexander Streets, about 2 miles from the location of the Weather Burean Station on the Alexander Young Building, occupied September i, 1904. Elevation in first location about 50 ft . and the latter III ft .
Observations: The standard adopted is the mean of the mean daily maximum and mean daily minimum temperatures. From 1883 to 1889 the observations at \(6^{\text {h }}\), I \(4^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\) only were available, and these values have been corrected to \(\frac{1}{2}(M+m)\) by applying a correction based on data for the years 1899 to 1903, as follows:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. \({ }^{\circ} \mathrm{F}\).
\(\frac{1}{3}\left(6^{h}+14^{h}+21^{h}\right)\)
to \(\frac{1}{2}(\mathbf{M}+\mathbf{m})+0.21+0.27+0.39+0.49+0.55+0.57+0.57+0.57+0.53+0.45+0.33+0.23\)
Precipitation.
Authorities: 1874 to 1920 manuscript data supplied by the United States Weather Bureau, Washington.
Site: Records made by different olsservers but all within short distances of the present Weather Bureau location. Elevations range from 50 ft . to III ft . above the ground. No corrections have been applied.

\section*{PIILIPPINE ISLANDS}

APARRI
Autifority.
Weather Bureau, Department of Agriculture and Natural Resonrces, Manila, Philippine Islands.
Pressure.
Site: The height of the barometer above Mean Sea Level was: 1903 to 1906 July io . . . . . . . . . . . . . . . . . . . . . . . . . 3.50 m . Igo6 July II to 1920 August I7 . . . . . . . . . . . . . . . 5.64 m. 1920 August 18 to 1921 . . . . . . . . . . . . . . . . . . . . . 8.05 m .

All values have been reduced to a height of 5.05 m . by applying the following corrections :
1903 to Igo6 July io. . . . . . . . . . . . . . . . . . . . . - -13 mm .
1906 July I i to 1920 August \(17 . . . . . . . . . . . . . .+0.05 \mathrm{~mm}\).

Instruments:
1903 to \(19 I^{1}\) April. Tomelot barometer, index error correction applied -0.30 mm .
191 May to 1912 April. Fortin barometer, index error correction applied -0. SI m \(^{\mathrm{mm}}\).
i912 May to 1922. Tomelot larometer, index error correction applied -0.30 mm .
Hours: The values are the means of observations at \(2^{\mathrm{h}}, 6^{\mathrm{h}}, 10^{\mathrm{h}}\), \(14^{\mathrm{h}}, 18^{\mathrm{h}}, 22^{\mathrm{h}}\).
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -1.58 mm .
Temperature.
Site and Instruments: H. J. Green thermometers were in use throughout the period.
1903 to 1908 Octoher. Thermometers exposed in an American type shelter, at a height of 3 m . above the ground.
1908 November to 1920 August 17. Exposed in a shelter of tropical type with single screen and double roof (the lower made of wood and the upper made of nipa). Ileight of the thermoneters above the ground 1.35 m .
1920 August 18 to 192 I . Similar exposure to the \(\backslash\). of the former site alonit 200 m . distant.
1922. Similar exposure to \(N\). of preceding site about 500 m . distant.

\section*{Precipitation.}

Site and Instrument: A U. S. standard rain gage was in use throughont the period, at a height of I.12 m. above the ground.

Autiority:
ILOILO
Weather Pureau, Department of Agriculture and Natural Resources, Manila, l'hilippine Islands.

\section*{Pressure.}

Site: The height of the laroneter above Mean Sea I evel was:
1903 to igi2, May 27 . . . . . . . . . . . . . . . . . . . . . . . 6.00 m.
1912 May 28 to 1922................................ . 6.50 m.

All values have been reduced to a height of 6.50 m . by applying the following correction:

Instrument: A Tonnelot barometer was in use. The following are the index error corrections applied :
1903 to 1907 . . . . . . . . . . . . . . . . . . . . . . . . . . . . -0.60 mm.
1907 to 1922........ . . . . . . . . . . . . . . . . . . . . . . -0.24 mm .
Hours: The values are the means oi observations at \(2^{\mathrm{h}}, 6^{\mathrm{h}^{1}}, 10^{\mathrm{h}^{\mathrm{h}}}\), \(14^{\mathrm{h}}, 18^{\mathrm{h}}, 22^{\mathrm{h}}\).
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -1.84 mm .

\section*{Temperature.}

Site and Instruments: H. J. Green thermometers were in use throughout the period, exposed in an American type shelter, with the thermometers 2.50 m . above the ground. On May 28, I9I2 the shelter was moved NE. about 500 m . distance.
Hours: The values are the means of observations at \(2^{\mathrm{h}}, 6^{\mathrm{h}}, 10^{\mathrm{h}}\), \(14^{\mathrm{h}}, 18^{\mathrm{h}}, 22^{\mathrm{h}}\).

\section*{Precipitation.}

Site and Instrument: A L. S. Standard rain gage was in use throughout the period. The height of the rim of the rain gage above the ground was:
I903 to 1912 May \(27 . . .\).
1912 May 28 to 1922 . . . . . . . . . . . . . . . . . . . . . . . . . 1. io m.

\section*{LEGASPI}

Authority.

Notes: All values have been conrected to momal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -1.77 mm .
Temperature.
Sitc and Instruments: H. I. (ireen themometers were in use throughout the perind.
1903 to 1910 September. Thermometers exposed in an American type shelter, at a height of 2.30 m . above the ground.
IgIo October to 1922. Thermoneters exposed in a tropical shelter, with single screen and domble roof the lower made of wool and upper made of nipa) : the thermometers in this shelter were \(4.25 \mathrm{m1}\). alonve the ground.
Hours: The values are the means of oloservations at \(2^{\text {h }} \cdot 66^{\mathrm{h}} \cdot 10^{\mathrm{h}}\). \(14^{\text {h }}, 18^{\text {h }}, 22^{\text {h }}\).

\section*{Precipitation.}

Sitc and Instrumonts: A L.S.Standard rain gage was in use throughout the period.
1903 to 1908 April 20. Rain gage exposed on the roof of the station house, at a height of 3.6 m . above the ground.
igos April 25 to 1910 October. Exposed on level grommel nearer to the sea, at a height of 0.80 m . alone the ground.
I910 Oetober to 10, 1 March. Exposure less open than the preceding ones.
IgI March to 1922. Fxposed on a roof, in a more open position than before, at a height of 3.8 m . above the ground.

\section*{MANILA}

Authority:
Weather Burean, Department of Agriculture and Natural Resources, Manila, I'hilippine Islands.

Pressure.
Site: The height of the barometer above Mean Sea Level was 14.2 m . throughout the period ( 1877 to 1922 ).

Instruments: A Fortin barometer was in use. The following are the index error corrections applied:

1892 September to igoi Octoher \(17 \ldots \ldots . . .+0.25 \mathrm{~mm}\).

igI 5 May 20 to ig2i February i . . . . . . . . . . . . -0.25 mm .

Hours: The values are the means of 24 hourly observations.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -1.72 mm .

\section*{Temperature.}

\section*{Site and Instruments:}

1887 to 1903 Negretti \& Zambra thermometers exposed in a standard screen on the Observatory tower which is 16 m . above the ground. The thermometers are 1.5 m . above the roof of the tower.

I904 to 1909. The station was transferred to a park, 121 m . ESE. of the Observatory tower. H. J. Green thermometers exposed in a tropical shelter without a screen but with a double roof, the lower made of nipa and the upper made of wood. The thermometers were I .5 m . above the ground.
1910 to 1922. The station was transferred to a more open site in the park, 81 m . NNW. of the previous site. Thermometers exposed in a larger tropical shelter with a double roof, the lower made of wood and the upper made of mipa. The thermometers were 1.5 m . above the gronncl.

Hours: The values are the means of 24 hourly olservations. Precipitation.

Site and Instruments:
1887 to 1903. Sarious types of pluviometer were in use but chiefly a Symons or a Crossley type, made by Negretti and Zambra. The instruments were exposed on the Observatory tower, i6 m . above the ground.

1904 to 1923. A U.S. standard rain gage was in use. The rims of the rain gages were abont 1 m . above the roof of the tower.
Hours: Previous to 1915 , the rainfall referred to the civil day. From 1915 onwards, the rainfall was for the 24 hours beginning at \(6^{\text {h }}\).

\section*{SOUTH AMERICA \\ ARGENTINA}

Autherity:
The data from the Argentine Stations were prepared by the Climatological Section of the Argentine weather service ( Oficina Metcorológica Nacional, Argentina).
Sites.
The early observers of the Argentine weather service were voluntary observers, and the exposures of the instrmments were not standardized. Reginning with 1885 more systematic methods were introdluced and moderate salaries paid to the observers. The instruments and exposures were standardized and inspected by travelling inspectors from the central office.
The thermometers are exposed in a standard lonver screen appproximating in size to that used by the United States Weather Burean. At most of the stations it is within 6 or 8 ft . of the earth's surface.
The standard rain gage is abont 8 cm . in diameter and is attached to a post extending 1 to 2 m . above the ground.
Hours of Observation.
Until the end of 1,03 observations were mate at \(7^{h 1}, 14^{1 /}\). and \(21^{\text {h }}\). Begimning with Jantary \(1,10,4\), they were made at \(8^{h}\), \(14^{\text {h }}\), and \(20^{h}\). The mean pressures given in the tables are the means of these hours corrected to the means of 24 hours. The mean temperatures are the means of the daily maxima and minima, \(\frac{1}{2}\) (daily Max. + daily Min.) corrected to the mean of 24 hours by means of corrections derived from themograph records. The rainfall at most of the stations was observed at \(7^{1 /}\) or \(8^{h}\).

\section*{BAHIA BLANCA}

Holizs of Observation.
Some of the earlier years were from observations made at variOns combinations of hours, but all are corrected to mean of 24 hours.

Site.
The meteorological olservations in the city of Buenos Aires begin with those made by Sr. D. Manuel Eguía, 1856-1875. The next series were those of Sr. D. Emillo Rosetti at the Colegio Nacional, 1873-1897. A third series of observations was made in Calle Independencia by Calestino Zambra, i8931902. The next series were at the port works, igor-igo6. Finally, beginning with 1906. they were at the first class observatory inaugurated at Charcarita in the suburbs of Buenos Aires. These different sets of observations were compared and reduced to a miform series at the Oficina Meteorológica.
Hours of Observation.
Hourly readings were oltained from barographs and thermographs checked by eye observations after 1891. Preceding that date observations at \(7^{h}\). \(14^{\mathrm{h}}\). and \(21^{\mathrm{h}}\) are corrected to the mean of 24 hours.

Sire.

\section*{CORDOBA}

The meteorological observations were begun at the Astronomical Observatory; but in 1885 the instruncnts were removed to the meteorological observatory established in that year.
Hours of Observation.
All values are reduced to the mean of 24 hours. Since \(188+\) hourly readings have been obtained from barographs and thermographs checked by eye observations several times a day.
Further details of the instruments used and exposures during the early years of observation are found in the Anales de la Oficina Meteorológica Nacional, Argentina.

GOYA
Hours of Observation.
\(7^{\text {h }}\), \(14^{\mathrm{h}}\) and \(21^{\mathrm{h}}\) or \(8^{\mathrm{h}}\). \(14^{\mathrm{h}}\) and \(20^{\mathrm{h}}\) corrected to mean of 24 hours.

\section*{RECIFE}

Pressure.
Authority: From 1887 to 1898 taken from the reports of the Brazilian Government on file in the library of the Oficina Meteorológica Argentina. Pressure from igoo to 1922 furnished in manuscript by the Directoria de Meteorologia, Instituto Central, Brazil.
Site: Port Works Station. In December 1922 the station was moved to Olinda's hill near Recife.
Houts of Observation: From 1887 to 1909 five tri-hourly observations were made between \(6^{\mathrm{h}}\) and \(18^{\mathrm{h}}\). From 1910 to 1922 observations were made at \(7^{\mathrm{h}}, 14^{\mathrm{h}}\) and \(2 \mathrm{r}^{\mathrm{h}}\).
Note: All values were corrected for temperature. They were also corrected to normal gravity at \(45^{\circ}\) I.at. ly applying a correction of -2.0 mm .
'Temperature.
No data obtained.
Rainfall.
Authority: 1875 to 1909 data supplied by R. C. Mossman. 1910 to 1922 furnished by Directoria de Meteorologia, Brazil.
Site: Port Works.

\section*{RIO DE JANEIRO}

Pressure.
- Huthority: Directoria de Meteorologia, Instituto Central, Brazil.

Site: Olservatorio do Castello mutil ig22, height 6i+ +m . above sea-level. In 1923 the meteorological service was moved to a new site and the height of the harometer was 33.0 m . above sea-level. A correction of -2.4 mm . was applied to reduce the mean values to the old level. In 192t the Service was
moved to the Palacio dos Estarlos where the height of the barometer was \(1 \AA_{.}, 3 \mathrm{~m}\). above sea level. A correction of -3.7 was applied to the observed mean values to reduce them to the old level of \(6 r .4 \mathrm{~m}\).
Hours of Obseration: The hours of observation are not given but are stated to be 24 hour means in the Rescau Mondial.
Note: A gravity correction of \(-1 .+\) mmm was applied to all the mean values to reduce them to \(\left[\right.\) at. \(45^{\circ}\).
Temperature.
Authority: Robert C. Mossman.
Notes: The series of climatological onservations taken at the Astronomical olservatory of Rin de Janciro from 185 I to 1 Soo have been summarised by Senhor E. Cruls in his well-knowu work, O Clevira do Rio de Janeiro (Rio de Janeiro 1892). The temperature data were not reduced to a homogeneous system, and there were different systems of exposure and hours of observation. The foregoing data are from observations after 1870 when the exposure of the thermometers was changed and has remained constant to date, aiz. in a large pavilion with wooden louves. The hours of observation were 7,13 , and \(17^{\mathrm{h}}\) from January 1871 to December 1873:7. io, 13 and \(16^{h}\) from Jannary 1874 to June 1879 ; 4. 7. 10, 13, 16, 19, and \(22^{\text {h }}\) from July 1870 to Jume 1885 and afterwards at three hourly intervals heginninge at \(t^{\text {h }}\). The recluctions to true mean of 24 hours were obtained from a comparison of the values at each of the above combinations of hours with the mean of the \(S\) observations per day given in c.tenso in Bolctim Mcnsal for the five years 1000-1004 the corrections heing as follows:
Minus corrections in Tenths of a Degree C. to bring olservat tions to true mean temperature.

Jan. Frbs. Mar. Ipr. Vay Jume July Jug. Sept. Oct. Nos. Der
1reriorl

\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|c|c|c|c|}
\hline Jan. & 1871-Jume & 1879 & 9 & 9 & f & 5 & 4 & 6 & 9 & 6 & 6 & 6 & 8 \\
\hline July & 879 June & 1885 & , & \(\because\) & 1 & 1 & 1 & 1 & 1 & 1 & , & 1 & \\
\hline
\end{tabular}

The original data have all harl the above corrections applied hefore entering in the table. I am of the opinion that the minus corrections should be increased by \(0.4^{\circ}\) or \(0.5^{\circ}\) up to June 1879 as the data, \(i . c\). mean monthly temperatures. seem too high but I have let the values stand as corrected above.

Rainfall.
Authority and Sites: Same as for the pressure. On account of the removal of the gage from the Observatorio do Castello to the Torre Meteorologica in 1922, the values from July 1922 to April 1923 are only one half as large as the mean of 9 surrounding stations.

\section*{CHILE}

Authority:
The data given were copied from the publications of the Chilean Meteorological Service by Robert C. Mossman, except for Punta Arenas, which were copied from "El Clima de Punta Arenas " by José Re. S. J.. and from subsequent publications of the "Observatorio Meteorologico José Fagnano."
Exposure of Instruments.
For most of the stations the exposures are not described.
At Punta Arenas the instruments are exposed in a tower connected with the church. In 1908-1909 a new tower was constructed especially for the meteorological observatory where it continues up to the present time. Hourly readings of the pressure are taken from a Richard barograph checked by readings of a Fortin barometer at \(7^{h} \cdot 14^{\mathrm{h}}\) and \(21^{\mathrm{h}}\).
The thermometers and a Richard thermograph are exposed in a window shelter.
The rain gage is exposed on the roof but is well protected from the wind.
Hours of Observation.
For Evangelistas the pressure corrections to bring to mean of 24 hours are very small and apply only to a few months of the year as follows:
\(7^{\mathrm{h}}-14^{\mathrm{h}}-21^{\mathrm{h}}\). February - O.I. March -0.1 .
\(7^{\mathrm{h}} 26^{\mathrm{m}}\), \(1 \mathrm{o}^{\mathrm{h}}\), and \(16^{\mathrm{h}}\). January + o.i, March to June + o.1. November + o. I.
\(8^{\mathrm{h}}-14^{\mathrm{h}}-21^{\mathrm{h}}\), same as \(7^{\mathrm{h}}-14^{\mathrm{h}}-21^{\mathrm{h}}\).
At Punta Galera the hours of olservation for pressure were \(8^{\mathrm{h}}-14^{\mathrm{h}}-21^{\mathrm{h}}\) to July 1906 , then \(7^{\mathrm{h}} 26^{\mathrm{m}}\). (Greenwich noon) \(10^{h}\) and \(16^{h}\) to December 1910 and \(7^{h}-14^{h}-21^{h}\) since. The corrections applied in tenths of millimeters were for these series (to reduce to mean of 24 hours) as follows deduced from hourly data at Valdivia :

Hours
8-14-21
\(7: 26,10\), and 16 7-14-21

Jan. Feb. Var. Ipr. Way June July Sug. Sept. Oct. Nov. Dec.
\begin{tabular}{lccccccccccc}
0 & 0 & -0.2 & -0.1 & -0.1 & +0.1 & 0 & 0 & -0.1 & -0.2 & -0.1 & -0.1 \\
0.1 & +0.1 & 0 & 0 & -0.1 & -0.2 & -0.2 & -0.1 & 0 & 0 & 0 & +0.1
\end{tabular}
\(\begin{array}{llllllllllll}0 & 0 & -0.1 & -0.1 & -0.1 & 0 & 0 & 0 & -0.1 & -0.1 & -0.1-0.1\end{array}\)

The temperature data for Galera are the mean of the max. + min. (?)
The earlier Santiago data, \(186 \mathrm{I}-\mathrm{ISG1}\) were means of \(7^{\mathrm{h}}\). \(14^{\text {h }}\) and \(22^{\text {h }}\) corrected to mean of 24 hours, both for pressure and temperature. After 1892 the data are the means of 24 hours throughont the series.
Data for the years 1603 to 1906 at Iquique were derived from observations taken every two hours probably measured from a thermograph trace controlled by eye readings.
Data for the years 1900,1901 and 1902 were fron mean of observations taken at \(8^{h}-14^{h^{h}}-21^{h}\) brought to the mean of 24 hours ly the following corrections derived from comparison with the above two hourly olservations from lamary rgot to July 1906 as follows:
\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|c|c|}

\hline
\end{tabular}

Data for the years 1907 to 1910 are from the mean of the max. and min., corrections having been determined from a consparison of the mean max. and min. with the means of \(\frac{7^{h}+14^{h}+21^{h}+2^{h}}{4}\) which figure in the table for the period 1911-I92t. The years selected for obtaining the corrections were igi t to igly, the following being the corrections applied, to the mean of the max. and min.:
\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|c|c|}
\hline Jan. & Feb. & Mar. & Apr. & lay & Jume & July & lug. & Sept. & Oct. & Nov. & Dec. \\
\hline 11.0 & \(-0.1\) & 0.0 & -0.2 & 0.0 & -0.1 & 0.0 & \(-0.1\) & +0.1 & \(+0.1\) & \(+0.1\) & -0.2 \\
\hline
\end{tabular}

It is not possible to use any one series of data throughout, as previous to 19II in common with all other stations in Chile except Santiago and Punta Arenas, different systems of hours were in vogue, and the minimum thermometer often out of order or broken for long periods. This latter is a very frequent defect with the Chilean data previous to 191 I and was due apparently to a lack of systematic inspection at the coastal stations. Fortunately the detection of errors in the minimum thermometer is easy as it is at once apparent from the increased mean daily range.

\section*{SANTIA(i)}

Pressure.
Earlier data, 1861-1892, are the means of olservations at \(7^{\text {b }}, 14^{\text {b }}\) and \(22^{h}\) corrected to the mean of 24 hours, then the mean of hourly observations till 1915 . From 1016 to 1921 they
are the means of \(7^{h}\). \(14^{h}\) and \(2 I^{\mathrm{h}}\) reduced to the mean of 24 hours. The corrections used are as follows:
```

llll

```
    Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec.
    \(-0.24-0.17-0.03 \quad 0.00 \quad 0.00 \quad 0.00+0.10-0.00-0.05-0.13-0.13-0.18\)
\(7 \mathrm{~h}^{\prime}, 14^{\mathrm{h}}, 21^{\mathrm{h}} \quad-0.40-0.30-0.20-0.10-0.10-0.10 \quad 0.00-0.10-0.20-0.20-0.30-0.40\)

The apparent anomaly in the corrections to the mean of 24 hours is due to the circumstance that the earlier series, 1861 to 1892 , were derived from term day observations. The corrections for 1916 to 1921 were derived from hourly values given in pulblications Nos. 5, 7, 11, 17 of the Instituto Central Meteorológico y Geofísico de Chile for the years 1911 to 1914.

Temperature.
The hours of observation were the same as for the pressure and the mean values for the intervals 1861-1892, and 1916 to I92I were corrected to the mean of 24 hours. The other means were derived from hourly olservations.

Pressure.
Authorities: 1895 to 1915. London, Air Ministry, Meteorological Office, Ceophysical Memoirs, No. 15. The Climate and Weather of the Falkland lslands and South Georgia, by C. E. P. Brooks, London, 1920.
I916 to 1920. MS. data compiled by the Marine Division, Meteorological Office, London. The meteorological olsservations are taken by the Lighthouse Keeper and are entered in logs which are filed in the Marine Division.
Site: The height of the barometer above Mean Sea Level was:
I895 to I899, July 3. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . ft .
I899 July 4 to igo6 March . . . . . . . . . . . . . . . . . . . . . . . 75 ft.
1906 April to 1908 July . . . . . . . . . . . . . . . . . . . . . . . . 50 ft.
1908 August to 1920 . . . . . . . . . . . . . . . . . . . . . . . . . 70 ft.
All values have been reduced to Mean Sea Level by the addition of the following corrections:
1895 to 1899 July 3 . . . . . . . . . . . . . . . . . . . . . . . . . +3.0 mb .
1899 July 4 to 1906 March . . . . . . . . . . . . . . . . . . . +2.8 mb .
1906 April to 1908 July.......................... +1.8 mb .

Instruments: 1895 to 1914. Barometer no. 525, with an index error correction of -.001 in . at 29.5 ins . and + .oor in. at 30.0 ins.
1915 to 1916, August 12. Marine Barometer no. 75 with an index error correction of \(+.00_{+} \mathrm{in}\).
1916 August 13 to 1920. Station Barometer no. 6yo with an index error correction of +.002 in.
Hours of Obserzution: From i 895 to 1907 May and from 1908 Angust to 1920, the observations were taken at \(0^{\mathrm{h}}, 4^{\mathrm{h}}, 8^{\mathrm{h}}, 12^{\mathrm{h}}, 16^{\mathrm{h}}\), and \(20^{\mathrm{h}}\).
Incomplete observations were taken from 1907 June to 1908 June, at \(8^{h}, 16^{h}\), and \(20^{h}\), and these values were corrected to the mean of the six observations a day by applying the following corrections:
\(\begin{array}{ccccccccccccr} & \text { Jan. } & \text { Foll. } & \text { Mar. } & \text { Ipr. } & \text { May } & \text { June } \\ \text { muly } & \text { Jug. Sept. } & \text { Oct. } & \text { Nov. Dec. }\end{array}\)
No observations were available for 1908 July .

Notcs: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of +0.6 mb .
The first olservations taken in the Falkland Islands were by Sir James Ross in April to August ist2 (Voyage to the Southern Seas, vol. ii, Pp. 428-437). Observations have been taken at Cape Pembroke Lighthouse since 1850 , with oceasional intervals. In January 1903, the station was inspected by the meteorologist of the " scotia" and since that date the olservations have been excellent. Prior to that date, however, the observations were probably less reliable.

1915 to 1920. Nanuscript data supplied by the Governor, Falkland Islands and filed in the Meteorological Office, L ondon.
Silc: The height of the rain gage aloove Mean Sea level is 6 ft . The rim of the rain gage is 1 ft . above the ground.

\section*{ST. HELENA}

\author{
Lat. \(15^{\circ} 57^{\prime}\) S. Long. \(5^{\circ} 40^{\prime} \mathrm{W}\).
}

Pressure.
Authorities: 1892 to 1920. Manuscript returns compiled by Henry S. Hands, Esq., until 1898 February and by A. L. C. Hands, Esq., since that date, and filed in the Meteorological Office, London.

Changes of Site: Some uncertainty exists about the actual height of the barometer at St. Helena. A change of site occurred on November 20, 1910, and the difference of elevation between the old and new sites, as determined by survey, is 75 ft . Height of cistern above Mean Sea Level was stated in 1892 to be 1905 ft ., making the present height 1980 ft . A re-survey ly Capt. Mainwaring gave the present height as igoo ft., but a comparison with some earlier observations at a low-level station and with isobaric charts of the South Atlantic suggests that this determination is about ioo ft. too low. An allowance has been made for the change in height of 75 ft ., by applying the following corrections to the values from 1 So2 to 1910, November 20 :

Instrument: Barometer no. A. 202 by Adie, with an index error correction of -.014 in . was in use throughout the period.
Hours: The hour of observation was \(9^{\text {h }}\), local time, throughout the period.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -.061 in .
Mean Temperature.
Authorities: As for Pressure.
Site: The height of the thermometer screen above Mean Sea Level is about 1900 ft . There has been no change of site during the period of olservations.
Hours: The hour of olservation was \(9^{\text {h }}\). local time, throughout the period.
frechititation.
Authoritics: As for Pressture.
Site: The site of the rain gage was changed on November 20, 1910. Previous to that date the height was given as 1890 ft ., and subsequently as 2020 ft ., but for the reasons given under "Pressure" these heights are only approximate.

\section*{SOUTH GEORGIA (GRYTVIKEN)}

Lat. \(54^{\circ} 13^{\prime}\) S. Iong. \(36^{\circ} 33^{\prime} \mathrm{W}\). \(\mathrm{H}_{\mathrm{b}}=4 \mathrm{~m}\).
Authority.
Direccion de Metcorologia, Argentina.
Pressure.
The pressure data have been derived from hourly barograph values checked by eye observations.
Temperature.
From January 1905 to June 1907 the original means deduced from the tri-daily observations were too high owing to faulty exposture of the thermometers which were affected by solar radiation. For this period the means were derived from the (observation at \(8^{\mathrm{h}}\) brought to mean of day and by the mean of the mean minima similarly corrected. The following were the corrections applied:
```

    8 hours.
    0.2+0.2+0.3 +0.2+0.2+0.1 +0.3 +0.4 +0.2-0.1 0.2 - -0.1 +0.1
    Meanmin. +2.0 +2.8 +2.6 +2.7 +2.9 +3.1 +2.9 +2.8 +2.7 +2.8 +2.8
    ```

The mean temperature is thus derived from the mean of the \(\delta\) hours and mean minimum temperature corrected in this way. During the five months April to August the error resulting from the faulty exposure was small, averaging \(0.4^{\circ}\).
The years or months marked with an *after Junc Igo\& have been derived from the mean of the \(S^{h_{1}}-I 4^{h^{h}}-20^{h_{1}}\) observations brought to mean of day by the following minns corrections:
\(\begin{array}{lllllllllllll}0.5 & 0.4 & 0.5 & 0.2 & 0.1 & 0.1 & 0.1 & 0.0 & 0.2 & 0.4 & 0.4 & 0.5 & 0.3\end{array}\)
All the other months are derived from the mean of the hourly thermograph records controlled by eye readings at \(8^{h}-I 4^{h_{h}}-20^{h_{h}}\).

\section*{SOUTII ORKNEYS}

\section*{LAURIE ISLAND}

Autherity.

igo9 July to i9i I August . . . . . . . . . . . . . . . . . . . . . . 20 ft.
191 i September to 1913 November . . . . . . . . . . . . . . . . 29 ft .
1913 December to 1918 August . . . . . . . . . . . . . . . . . 26 ft .
All values are reduced to Mean Sea Level by corrections given in Table A.

Table A.-Corrcctions to Reduce Pressure V'alues to Mean Sea Level from Various Heights
\[
\begin{array}{ll}
6 \frac{1}{2} \text { feet }+.007 \text { inch } & 20 \text { feet }+.020 \text { inch } \\
18 \text { feet }+.018 \text { "" } & 29 \text { feet }+.0300^{\prime \prime} \\
23 \text { feet }+.024 \text { " } & 26 \text { feet }+.027
\end{array}
\]

Instriment: From 1890 March to 1897 April, an unknown barometer with an index error correction of \(+.004^{\prime \prime}\) was in use. From i 897 July probably up to 1918 August, barometer No. C. 683 (Adie) with no known index error correction was in use.

Hours: The hour of observation was \(9^{\text {h }}\) throughout.
Notes: All values are corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of -.076 in . or -.077 in . according to the barometer reading.
The pressure values from September igis were not considered sufficiently reliable to be included.
Temperature.
Authoritics: As for Pressure, igi8 September to 1919 October from the same source.
Site: As for Pressure.
Obserations: The standard adopted is the mean of the dry bullb observations at \(9^{\mathrm{h}}\), as it was found on examination of the mean daily maximum and minimum values that for a number of years these thermometers were recording incorrectly.
Precipitation.
Authorities: As for Temperature.
Sitc: As for Pressure.

\section*{NEW ZEALAND}

AUCKLAND

\section*{Authority.}

Dominion Meteorological Office, Wellington, New Zealand.
Pressure.
After investigation it was found that there were no barometric records from Auckland, sufficiently reliable for inclusion.
Temperature.
The standard adopted is the mean of the mean daily maximum and mean daily minimum.
Site: In i866 the height of the Observatory which was situated in a Park \(1 \frac{1}{2}\) miles from the Harbor was given as I 40 ft . above Mean Sea Level. In the year 1868 the Observatory was removed to a height of 256 ft . In 1888 the instruments were again rmoved to the roof of the Nuseum, \(\frac{1}{4}\) mile from the Harbor, and at a height of 125 ft . above Mean Sea Level. Owing to radiation from the slate roof, this station was condemned, and on September 1 , igog the instruments were finally removed to the Albert Park, \(\frac{1}{2}\) mile from the Harbor and at about the same altitude.
Precipitation.
Site: See Temperature.

\section*{CHRISTCHURCH}

Authority.
Dominion Meteorological Office, Wellington, New Zealand.
Pressure.
Site: The barometer is situated in the Magnetic Observatory at a height of 25 ft . above Mean Sea Level ( 1905 to 1923).
Instrument: A Kew pattern barometer was in use throughout the period.
Hours: The hour of observation was \(9^{\text {h }}\) throughout the period.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of \(-.00+\mathrm{in}\), and to Mean Sea Level.
Temperature.
Site: From 1864 to 1880 the Observatory was six miles from the sea and was 21 ft. above Mean Sea Level. This Olsservatory was discontinued about i880. Records from the Magnetic Olservatory are available from January I, 1905. The altitude of this station is 25 ft . above Mean Sea Level.
Hours: The standard adopted is the mean of the mean daily maximum and mean daily minimum temperature.

\section*{HOKITIKA}

\section*{Authority.}

Dominion Meteorological Office, Wellington, New Zealand.
Site: The Observatory is \(\frac{1}{4}\) mile from the sea, and the height has been estimated as from 8 to io ft . alove Mean Sea Level ( 1866 to 1923).
Pressure.
Hours: The hour of observation is \(9^{\text {h }}\) throughout the period.
Notes: All values have been corrected to normal gravity (Lat. \(45^{\circ}\) ) by applying a correction of \(-.0 o\) or \(^{\text {in... and to Mean }}\) Sea Level.
Temperature.
The standard adopted is the mean of the mean daily maximmm and the mean daily minimm temperatures.

\section*{Prechititation.}

Sitc: See above.

\section*{WELLINGTON}

\section*{Authority.}

Dominion Meteorological Office, Wellington, New Zealand. Site.

Wellington Observatory was \(\frac{1}{?}\) mile from the Harbor and go ft. aloove Me:m Sea Level in 1866. In 1869 it was removed to a
site 60 ft . above Mean Sea Level; next year to a permanent site above the Sydney Street cemetery, \(1 \not+\mathrm{ft}\). above Mean Sea Level. The barometer, however, was kept at the Mitseum, at an altitude of about 25 ft . On June 19, 1906 this Observatory was removed to what is known as Mount Cook, at a height of ino ft . above Mean Sea Level. It continued there tuntil July igiz when it was removed to the present site, at a height of 10 ft. above Mean Sea Level, and near the water front.
Pressure.
Hours: The hour of olservation is \(0^{\text {h }}\) throughont the period.
Notes: All values have heen corrected to normal gravity (Lat. \(45^{\circ}\) ) and to Mean Sea Level.
Temperature. 。
The standard adopted is the mean of the mean daily maximum and the mean daily minmm temperatures.
\[
\begin{gathered}
\text { SAMOA } \\
\text { APIA }
\end{gathered}
\]

Lat. \(13^{\circ}+8^{\prime} \mathrm{S}\) Lomg. \(1 \boldsymbol{y}^{\circ} \mathrm{f}^{\prime \prime} \mathrm{W}\).
Presslre and Temperature.
Authorities: " I Summary of the Metcorological Observations of the Samoa Observatory (i8go-IOzo)" by (i. Angenheister. Wellington, 1924.
Notes on station and observations are given in this publication.
1920-1925. Manuscript data supplied by the Director, Apia Observatory, Samoa.
Notes: From 1890 to 1910 , with the exception of the year igos, observations were taken daily at \(7^{\mathrm{h}}, 14^{\mathrm{h}}\) and \(2 \mathrm{I}^{\mathrm{h}}\). These were corrected to the mean of 24 hours and to the site of the new observatory at Mulinut by simultaneous observations from November 1902 to December 1904.
Since November 1902 the Samoa Olservatory at Mulinutı, Apia, has made olservations with recording instruments standardized daily.
Precipitation.
Authorities: Manuscript data supplied by the Director, Apia Observatory, Samoa.

Notes: Rainfall observations were taken at Sogi from i8go to igio and at Mulinuu from November igoz to 1920. By a careful comparison made at Apia, the necessary co-efficient to reduce the Sogi observations to those at Mulinuu was found to be .909 and the observations at Sogi were therefore multiplied by this factor so that the series is now comparable.
